

SOIL AND WATER CONSERVATION COMMISSION COST SHARE PROGRAMS ANNUAL REPORT FISCAL YEAR 2017

The Soil and Water Conservation Commission (Commission) has the statutory responsibility to create, implement and supervise three voluntary, incentive-based conservation programs including the Agriculture Cost Share Program (ACSP), the Community Conservation Assistance Program (CCAP), and the Agricultural Water Resources Assistance Program (AgWRAP). These programs are governed by 02 NCAC 59D and 02 NCAC 59H. Per Session Law 2017-10, this is the first report that consolidates annual reporting for the three programs.

Through these voluntary, incentive-based conservation programs, cooperators are provided educational, technical and financial assistance through their local soil and water conservation districts. The local districts are comprised of 492 elected and appointed district board supervisors, assisted by their staff and partners in natural resource conservation. These partners include technical and professional employees of the soil and water conservation district or county, the U.S. Department of Agriculture's Natural Resources Conservation Service (NRCS), the North Carolina Department of Agriculture and Consumer Services (NCDA&CS), NCDA&CS Division of Soil and Water Conservation (Division), and the North Carolina State University Cooperative Extension Service. Through these partnerships, districts provide the framework for contracting with participants and ensuring the work is performed according to established standards and specifications. The Soil and Water Conservation Commission (SWCC), the governing body of seven members chosen by the local district boards, provides statutory authority and allocates financial resources for these programs according to rules. The Division of Soil and Water Conservation provides administrative and technical support to the local districts, developing the standards of the program approved by the Commission, providing the accounting of funds for program implementation, and providing professional engineering assistance to the local staff. For more information, please refer to Appendix A: Funding and Compliance Process.

For most practices, the amount provided in cost share is based on 75 percent of a predetermined average cost for the practice up to a maximum of \$75,000 per cooperating applicant per year. However, some practices are cost shared on 75 percent of actual cost due to the variable nature of the practice. For ACSP and AgWRAP, farmers who qualify as beginning farmers or limited resource farmers, and farmers participating in an enhanced voluntary agricultural district are eligible to receive up to 90 percent cost share up to a maximum of \$100,000 per year.

Districts spot check a minimum of 5 percent of randomly selected active contracts each year to ensure that practices are being maintained properly. Spot checks for 2017 showed excellent compliance with maintenance requirements by cooperators. When practices are discovered to need additional maintenance, the district is usually able to assist the cooperator to restore the practice to its intended function. Districts follow the Commission's Non-Compliance with Maintenance Requirements for Cost Share Contracts Policy which requires cooperators to repair, re-implement or repay a prorated amount of funds for the practice if it is not functioning as planned or not being operated for its intended use as specified in 02 NCAC 59D .0107 and 02 NCAC 59H .0107. For more information, please refer to Appendix A: Funding and Compliance Process.

Program	Total Funding Requested	FY2017 State Appropriation
Agriculture Cost Share Program	\$18,286,819	\$4,016,998
Community Conservation Assistance Program	\$2,230,853	\$200,000
Agricultural Water Resources Assistance Program	\$6,854,975	\$1,477,500

Current appropriations do not enable districts to meet demand for financial assistance for installing BMPs to protect water quality and improve water resources in North Carolina.

A map of all contracts funded in FY2017 through these three programs can be referenced in Appendix B: Map of FY2017 Contracted BMPs. Additional contract information is available by county in Appendix C: Total Number and Value of FY2017 Contracts by County.

AGRICULTURE COST SHARE PROGRAM SUMMARY

The North Carolina Agriculture Cost Share Program (ACSP) was authorized by the General Assembly in 1983 to improve water quality associated with agriculture in three nutrient sensitive watersheds covering 16 counties. In 1990, the program was expanded to include 96 soil and water conservation districts (districts) covering all 100 counties across the state. In FY2017, there were 70 approved BMPs in the ACSP. BMPs include both short-term and long-term practices.

In total, the Commission allocated \$5,453,355 to districts. In addition to the 2017 appropriation, the Commission also had available for allocation (1) funds allocated to districts in 2016 with which districts were unable to execute contracts with cooperators prior to the end of the program year and (2) funds recovered from completed and expired contracts from program years 2014 through 2016. Despite the Commission's actions to improve efficiency of the ACSP, districts still must turn away two out of every three farmers requesting cost share assistance due to lack of available funding.

Districts obligated \$5,377,851 of state appropriated cost share funds to 466 contracts with farmers in program year 2017. In addition, the ACSP infrastructure was used to implement conservation practices using several other funding sources. In all, districts obligated \$5,766,836 from all appropriated and grant funds to 658 contracts. Appendix C is a list of 2017 contracts for each county.

Estimated Water Quality Benefits of ACSP Contracts Initiated in 2017

N.C.G.S 106-850.74(e) requires that each project's benefits to water quality be estimated before funding is awarded. To meet this requirement, the Commission chose three indicators of water quality benefits: (1) tons of soil saved, (2) pounds of nitrogen saved or managed, and (3) pounds of phosphorus saved or managed.

Soil savings estimates have been required on all ASCP contracts since the start of the program. Beginning with the 1997 program year, estimates of nitrogen and phosphorus savings were required.

The Division continues to work with the Division of Water Resources, NRCS, and North Carolina State University to improve and refine the methods used to estimate and account for nutrient reductions.

These estimates have allowed the Division to track progress made by agriculture relative to the nutrient reduction requirements in the Neuse, Tar-Pamlico, Jordan Lake and Falls Lake nutrient reduction strategies for agriculture. The ACSP is playing a key role in helping farmers achieve and maintain the nutrient reductions required by these rules.

Between 1984 and 2017 it is estimated that an average of 7 million tons of soil have been saved annually during the life of the program. Also, the program has reduced nitrogen and phosphorus losses from agricultural land by 21 million and 6.5 million pounds per year, respectively.

Currently there are not good scientific tools the agricultural community can use for estimating the benefits for many important and popular BMPs, such as livestock watering wells and livestock exclusion fencing. Still, these practices are known to improve water quality by reducing livestock dependence upon streams for watering. The Technical Review Committee for the program has formed a conservation effects workgroup to review any new data or potential accounting methods that come available. Another factor impacting benefits is the reduced total number of contracts per year. Fewer contracts are due to the reduced funding for the program and the increase in costs for materials and practices over time.

In fiscal year 2017, the General Assembly also appropriated \$2,448,778 to cost share for technical assistance in local soil and water conservation districts. Local governments provide more than 50 percent match for salaries and operating expenses, including office space and administrative support for these technical assistance positions. This year, the cost share technical assistance program cost shared on 102.6 technical positions in 94 districts in 98 counties to assist farmers in designing and installing BMPs. These state technical assistance cost share funds maintain a local conservation infrastructure and are critical to sustain local county support and funding for local delivery of the program.

AGRICULTURE COST SHARE PROGRAM ACCOMPLISHMENTS

- 208,025 acres of marginal or environmentally sensitive cropland have been converted to trees, grass or wildlife habitat areas.
- 4,131 waste management practices have been installed to properly store and manage dry and wet animal waste.
- 1,034 mortality management systems have been installed to properly manage livestock mortalities to minimize water quality impacts.
- 4,436 water control structures have been installed improving water management on and reducing nutrient loss from approximately 330,595 acres.
- 1,378 miles of fencing have been erected, in combination with other practices (e.g., watering sources) to exclude livestock from streams.
- 664,269 acres of cropland have been converted to no-till or conservation tillage to reduce sediment loss associated with traditional practices.
- 17,022 acres of forested riparian buffer have been established to reduce nutrient loss from approximately 68,099 acres of cropland.
- 161 chemical handling and management structures have been installed to provide an environmentally safe means for mixing and storing agricultural chemicals.

COMMUNITY CONSERVATION ASSISTANCE PROGRAM SUMMARY

Session Law 2006-78 established the Community Conservation Assistance Program (herein referred to as CCAP). The purpose of the program is to reduce the delivery of nonpoint source (NPS) pollution into the waters of the State by installing best management practices (BMPs) on developed lands not directly involved in agricultural production.

Currently there are 17 best management practices (BMPs) that CCAP utilizes to address the site-specific natural resource concerns of the applicant. These vary in complexity and cost ranging from stream restoration projects to the closing of abandoned wells. The Commission, based upon a newly adopted rule 02 NCAC 59H .0103 has maximum flexibility now for the allocation of the limited amount of funding available. The Commission may allocate funds at the state, regional, or local district level. For the 2017 fiscal year, the Commission chose to allocate funds regionally (eastern, central, western) based upon a competitive priority ranking process. The Community Conservation Assistance Program Advisory Committee reviewed the ranking parameters, cost-shared BMPs including their standards and specifications, and general program guidance. This independent advisory committee provides review of existing and potential future policies for the program and makes their recommendations to the Commission, which then decides the program guidelines and functionality.

Districts obligated \$244,036 of state appropriated cost share funds to 30 contracts with cooperators in fiscal year 2017. In addition to the 2017 appropriation, the Commission also had available for allocation (1) funds allocated to districts in 2016 with which districts were unable to execute contracts with cooperators prior to the end of the program year and (2) funds recovered from completed and expired contracts from program years 2014 through 2016. The CCAP infrastructure was also used to implement conservation practices using several other funding sources. In all, districts obligated \$252,024 from all appropriated and grant funds to 38 contracts. Appendix C is a list of 2017 contracts for each county.

2017 was the first year during the ten-year period of the program that the competitive regional application process was used to distribute funds to the local districts. An equal sum of \$69,362 was provided to each region (total allocation equaling \$244,036 eastern, central, and western). This amount includes the General Assembly allocation along with some funds that were cancelled from previous year contracts. Based on the highest priority rankings for each region, the number of contracts awarded are as follows:

Eastern	7 contracts funded of 18 submitted
Central	16 contracts funded of 16 submitted
Western	7 contracts funded of 15 submitted

Each contract was capped at \$15,000 per contract. Prior to the 2017 fiscal year, individual district allocations were approximately \$4,500. This increase in funding, while limiting the number of contracts awarded, allowed for funding of larger-scale projects. The differences in the number of contracts above indicates the varying strategies each region employed for submission of projects.

COMMUNITY CONSERVATION ASSISTANCE PROGRAM ACCOMPLISHMENTS

- 267 abandoned well closures preventing groundwater pollution and contamination.
- 20,957 square feet of backyard rain gardens installed to reduce nutrient and suspended solids runoff.

- ❑ 195 cisterns to reduce volume and velocity flows to adjacent streams and reuse captured runoff water.
- ❑ 41 acres of critical area plantings to control erosion, reducing sediment and nutrient loading.
- ❑ 2.88 acres of grassed swales to eliminate gully erosion that deposits sediments and nutrients directly to watercourses.
- ❑ 4,295 linear feet of marsh sills to eliminate shoreline erosion.
- ❑ 7.1 acres of riparian buffer to reduce sediment and nutrient loading from entering streams by slowing the flow of runoff, dropping sediments before entering the stream and allowing the root system to absorb the attached nutrients.
- ❑ 6.77 acres of stormwater wetlands to capture and treat sediments and nutrients, and to reduce volume and velocity flows into adjacent watercourses.
- ❑ 35,525 linear feet of stream restoration and 23,216 linear feet of streambank and shoreline protection to eliminate direct sedimentation into streams by eliminating bank erosion.

AGRICULTURAL WATER RESOURCES ASSISTANCE PROGRAM SUMMARY

The North Carolina Agricultural Water Resources Assistance Program was authorized through Session Law 2011-145, and became effective on July 1, 2011. This program, referred to as AgWRAP, was established to assist farmers and landowners in doing any one or more of the following:

- Identify opportunities to increase water use efficiency, availability and storage;
- Implement best management practices (BMPs) to conserve and protect water resources;
- Increase water use efficiency;
- Increase water storage and availability for agricultural purposes.

Public benefit of this program is achieved by the following:

- Reducing competition for water resources by public users
- Improving the efficient use of water while enabling the industry to produce food, fiber and other agricultural products
- Preparing the agricultural industry to weather future droughts
- Generating and protecting local jobs in agriculture and agribusiness

The Commission allocates funds annually for best management practices at the district level, as well as through statewide and regional application processes. Eligible AgWRAP practices include: agricultural water supply/reuse ponds, agricultural pond repair/retrofits, agricultural pond sediment removals, agricultural water collection and reuse systems, baseflow interceptors (streamside pickups), conservation irrigation conversions, micro-irrigation systems, and water supply wells. In FY2017, the Commission conducted a regional application process (40% of available BMP funding) for agricultural water supply/reuse ponds, agricultural pond repair/retrofits, agricultural water collection and reuse systems, and conservation irrigation system conversions. In addition, the Commission allocated \$959,404 (60% of available BMP funding) to 87 soil and water conservation districts who requested funding for AgWRAP practices using set allocation parameters as specified in the AgWRAP Detailed Implementation Plan.

Districts obligated \$1,682,951 of state appropriated cost share funds to 186 contracts with cooperators in fiscal year 2017. In addition to the 2017 appropriation, the Commission also had available for

allocation (1) funds allocated to districts in 2016 with which districts were unable to execute contracts with cooperators prior to the end of the program year and (2) funds recovered from completed and expired contracts from program years 2014 through 2016. Appendix C is a list of 2017 contracts for each county.

AGRICULTURAL WATER RESOURCES ASSISTANCE PROGRAM ACCOMPLISHMENTS

- 63 new agricultural water use ponds were installed for water supply for irrigation or livestock watering.
- 43 existing agricultural ponds were repaired, retrofitted or expanded to provide water supply.
- 53 agricultural ponds had sediment removed to increase water storage capacity.
- 236 water supply wells installed to provide a water source for irrigation, livestock and poultry, aquaculture, freeze protection and on-farm processing.
- 29 conservation irrigation system conversions completed to increase water use efficiency and decrease water use.
- 6 baseflow interceptors/streamside pickups to collect and/or store water for agricultural use.
- 3 agricultural water collection and reuse systems were installed for water reuse or irrigation on agricultural operations.

COST SHARE PROGRAMS CONCLUSIONS

The Commission believes Cost Share Programs are being administered cost-effectively and that considerable water quality and water quantity benefits are being realized for the investment made with state funds. ACSP and AgWRAP aid agricultural operations in making essential water quality and water quantity improvements. The cost of the conservation practices installed through these programs cannot be passed on to the consumer in the price of the food or fiber product. ACSP and AgWRAP thereby contribute both to water resource improvement and to sustaining a strong state agricultural economy. CCAP fills a need with voluntary, incentive-based stormwater retrofits where municipal regulatory programs cannot help individual landowners address water quality problems. Where municipalities are hindered by right-of-way and liability issues, CCAP can offer relief to homeowners and businesses to protect their properties and improve water quality. The Commission continues to emphasize prioritizing, targeting, accountability, leveraging, and adaptability in managing these public funds to further improve the water quality and quantity benefits intended by the General Assembly.

Increased costs of fuel, labor, and materials have significantly impacted the amount of conservation all three programs can implement and the number of cooperators who can be assisted. The Commission has taken actions to improve program efficiencies that have helped to partly offset these impacts in the short-term. ACSP and AgWRAP continue to play a vital role in assisting farmers and ranchers with voluntary water quality protection and water resource improvement and with compliance with state and federal regulatory requirements. CCAP functions as the only program that provides relief to individual property owners that are affected by offsite increased stormwater that state and local watershed-level regulations cannot address. These programs are our state's cornerstone in efforts to support stewardship for the benefit of water quality and quantity and all the citizens of the state of North Carolina.
