General Laboratory Policies

- Fees and test offerings are subject to change without prior notification. Current information is located on the NCVDLs website: www.ncagr.gov/vet/ncvdl/VetLabFees.html
- Samples outsourced to other labs for analysis are charged at the rate of the subcontracting lab or are billed directly from the subcontracting lab. Handling fee (including shipping charge) is \$20.00 per accession.
- Rabies testing is performed by the North Carolina State Laboratory of Public Health. To submit fresh brain for rabies only testing, contact your local health department. Samples for rabies testing as part of a complete neurological examination will be forwarded to the public health lab by NCVDLs at no charge.
- "Food and fiber" animals include cattle, swine, sheep, goats, camelids, raites, aquaculture species, wildlife, or other types of production animals. "Small Companion" animals include cats, dogs, companion/mini-pigs, pocket pets, reptiles, amphibians, pet birds and ornamental fish. "Large Companion" animals include horses, donkeys, mules, zoo animals, and all other non-production animal species. "Poultry" includes the following domesticated species: chickens, turkeys, ducks, geese, guinea fowl, pheasants and quail.
- Necropsy disposal fees are assessed on all carcasses based upon carcass weight. Due to state regulations, remains of animals submitted for necropsy cannot be released unless prior arrangements have been made for cremation by a commercial crematory service.
- Carcasses are disposed of following examination unless private cremation is requested. Based on diagnostic necessity and carcass condition tissue samples may be retained. Fresh tissue samples may be stored for one month from the date the animal is received. Formalin fixed and frozen tissue samples may be stored for up to two months. If additional tests are requested and warranted, these requests must be made within this time period.
- Due to the potential health risk to NCVDLs personnel we do not accept carcasses of or samples derived from primate species. The only exception is formalin fixed samples can be submitted for histopathology testing.
- Organ pluck fees are assessed when large, fresh tissue specimens are sampled and disposed.
- Specimens submitted to the laboratory become the property of the NCVDLs and are subject to additional diagnostic testing for state and federal disease surveillance programs, particularly involving foreign animal diseases.
- Out of state submissions are charged at two times the in-state rate. Out of state test fees apply only when the veterinarian, owner and animal reside outside of North Carolina. Not all laboratory services are available to out of state clients.
- Not all tests are available at every laboratory within the NCVDLs. Please consult the User Guide for tests by location. Core services of bacteriology, histopathology, immunohistochemistry, molecular diagnostics and virology are performed at the Rollins facility.
- Toxicology testing is outsourced to the Pennsylvania Animal Diagnostic Laboratory System (PADLS) through a memorandum of understanding. Clients will be charged a specimen handling fee and billed directly from PADLS for services rendered. Test services and fees may be found at: <http://www.padls.org>
- A fax or electronic report is provided at no charge to the client.
