

Disaster Livestock Stream Crossing

Definition/Purpose

A Disaster Stream Crossing means repairing or replacing a trail constructed across a stream to allow **livestock** to cross with minimal disturbance to the stream bottom and to reduce soil erosion on the banks.

Policies

1. Forded or structural crossings are allowable.
2. Adequate livestock exclusion fencing is encouraged.
3. Cost share funds may be used to repair or replace existing gates.
4. If this crossing is intended for vehicular or equipment access, please use the Non-Farm Field Road Repair BMP or Emergency Access Restoration BMP.
