Annual Agricultural Water Assessments and Risk-Based Outcomes

Pre-harvest agricultural water for non-sprout covered produce.

Based in part on inspections and maintenance of agricultural water systems and an evaluation of various factors, including:

- Nature of the water source and distribution system
- Degree of protection of the water system
- Water use practices

- **Crop characteristics**
- **Environmental conditions**
- Other relevant factors

Is my water **not safe or not of adequate** sanitary quality for its intended use?

Immediately discontinue use and implement corrective measures before resuming use.

Are adjacent or nearby land uses reasonably likely to introduce known or reasonably foreseeable hazards from animal activity, biological soil amendments of animal origin (BSAAO), or human waste?

YES

EITHER:

Implement mitigation measures promptly, and no later than the same growing season.

Are there other conditions that are reasonably likely to introduce known or reasonably foreseeable hazards onto covered produce or food contact surfaces? **MUST DO**

Implement mitigation measures as soon as practicable, and no later than the following year.

Water testing as part of assessment to determine if measures are needed.

CONTINUE REGULAR INSPECTIONS AND MAINTENANCE OF YOUR AGRICULTURAL WATER SYSTEMS.
