25TH ANNIVERSARY ISSUE

The North Carolina Department of Agriculture, through its Statistical Division, herewith presents this issue of "Agricultural Statistics," in recognition of 25 years of services rendered.

Early in 1919, just twenty-five years ago, the Cooperative Crop Reporting Service was started. The Federal Bureau of Crop Estimates, now the Bureau of Agricultural Economics, gained the interest of the North Carolina State Department of Agriculture as a post war step toward better planning for state and county farm information. It was in June 1919 that the formal agreement between the United States and North Carolina Departments of Agriculture was approved and signed. The agricultural services to the

State were begun immediately and have steadily increased through the years since.

North Carolina is credited with having done more than any other state in providing educational material looking to better understanding and appreciation of farm statistics. This is done by means of printed educational folders, this publication, and frequent special news sheets, such as "Reporters News," which has been issued monthly since 1923.

The Department is grateful to all crop reporters and others who have contributed to the agricultural information used in compiling the "facts and figures" in this issue, and it is hoped that this publication contains useful farm information that will meet the needs of farmers and agricultural leaders throughout the State.

TABLE OF CONTENTS

	Page		Page
North Carolina Agricultural Statistics—Introduction	3	Cash farm income, government payments, and value of product consumed, 1925-1942	37
North Carolina crops, revised estimates 1941, preliminary 1942	4-5	Index numbers of North Carolina farm prices, 1910-1943	36
United States crops, revised estimates 1941, preliminary 1942	6	Average prices received by farmers—seasons 1935-1940, monthly 1941-1943	37
Values of thirteen principal crops 1942	7	LIVESTOCK AND PRODUCTS—Revised estimates of numbers, N. C. and U. S., 1933-1943	38
TOBACCO—County estimates 1940, 1941, 1942	8	Farm production, disposition and value of meat animals, 1926-1942	38
Seasons' warehouse sales by belts, 1936-1937 to 1942-1943	9	Revised estimates of numbers and value by classes, 1925-1943	39
Revised estimates by types, 1929-1942	9	Cash and gross income, 1925-1942	39
COTTON—County estimates 1940, 1941, 1942	10	Pig crop report, June 1943, with comparisons	41
Revised estimates of cotton by states, 1941-1942	11	Pig crop report, December 1943, with comparisons	39
Reduction from full field, 1926-1942	11	Livestock numbers, listed for taxes, 1941-1942	40
Ginnings, 1936-1942	11	Farm dairy products—Production and disposition of milk and milk products on farms, 1924-1942	41
Revised estimates cotton lint, cottonseed, 1929-1942	11	Quantity sold, price and values and gross income from dairy products, 1924-1942	41
PEANUTS—County estimates 1940, 1941, 1942	12	POULTRY AND EGGS—Chickens on farms January 1, production and disposition, 1925-1943	42
Revised estimates, 1929-1942	13	Number layers in poultry flocks, monthly 1925-1943	42
CORN—County estimates 1940, 1941, 1942	14	Chicks hatched by commercial hatcheries, N. C. and U. S., monthly 1933-1943	43
Revised estimates, 1929-1942, all, for grain, for silage and for forage	15	Turkey estimates, 1929-1943	42
Number and percent farms producing corn by size groups (1939)	15	Egg production in North Carolina poultry flocks, monthly 1925-1943	42

NORTH CAROLINA AGRICULTURAL STATISTICS

INTRODUCTION

"North Carolina Agricultural Statistics" is the annual publication of the North Carolina Federal-State Cooperative Crop Reporting Service. This publication carries the official state and county estimates of the North Carolina and United States Departments of Agriculture and other farming facts and figures relating to North Carolina. Included in this report are county estimates of acreage, yield, production, price, and value of the main crops. State estimates of number, value, disposition, value of production, and income from each of the main kinds of livestock; sows farrowed and pigs raised; production and disposition of milk and milk products; poultry and egg production; prices received by farmers; farm labor, supply and demand; wage rates and other statistics.

SOURCE OF ESTIMATES

The estimates shown are, for the most part, the official estimates of the United States Department of Agriculture and are based on the confidential reports of thousands of farmers, dealers and buyers of farm products, warehousemen, cotton ginner, thresher and combine operators, hatcherymen, and others. The State Farm Census reports made each year by the list takers are used as a basis for determining county estimates of the principal crops.

REVISIONS

Since most estimates are made from a large number of farmers judgments, exactness and accuracy are not expected. Before using any figures they are compared with other known facts. Some of the information needed in checking an estimate is not available until after the first published estimates. It is these checks that make it necessary to revise the original estimate. For this reason the reader may find two different estimates of the same item. In such cases the revised or the latest published figure is the one to be used. For instance, on pages 4 and 5 are shown estimates for North Carolina field and vegetable crops, fruits and nuts with the production rank of each. The United States figures are shown on page 6. Revised 1942 and preliminary 1943 estimates are shown on page 50. The preliminary 1942 estimates are shown on page 4 and 5 because these were used in the county estimates which were prepared prior to the last revision of the state estimates shown on page 50.

County estimates and related information for the thirteen principal crops on pages 8 to 29 are largely determined from the State Farm Census (township) acreages, and farmers judgments of yields and prices. The values of the thirteen main crops are summarized

by counties on page 7. Cotton ginnings, tobacco warehouse sales, AAA measurements and other check facts are used. Additional information contained in the annual Farm Census report is shown on pages 30 and 31.

COMMERCIAL CROPS

Commercial truck crop production (pages 33, 34 and 35) relates to those areas growing crops primarily to supply the large consuming markets more or less distant from the producing center. Production in home and market gardens, intended primarily for local sale is not included. Commercial truck crop prices shown are the estimated season average of prices received by farmers at the shipping point.

CARLOT SHIPMENTS

The table of carlot shipments shown on page 33 is published for the purpose of showing in a general way the season of heavy market movement of fruits and vegetables from the state. These data cannot be taken as a measure of the volume of shipments because motor truck shipments, which make up a large part of the market movement, are not included. Complete records of truck shipments are not collected but available data indicate that for most of these crops the volume of movement by motor truck usually exceeds rail shipments.

PRICES RECEIVED BY FARMERS

Mid-month prices received by farmers as shown on page 37 are based on returns from a special list of price reporters, composed mainly of country buyers or dealers in agricultural products. These average local market prices are, for the most part, prices received for all grades and qualities of a specific commodity sold on or about the 15th of each month.

WEIGHTS AND MEASURES

The weights and measures given in the table on page 48 are not all official. For most products, particularly fruits and vegetables, there is considerable variation in weight per bushel, for example, due to difference in variety or size of the product, condition and tightness of pack, degree to which the container is heaped, etc. However, this table as well as the planting table on the next page may vary according to the commodity or locality, but may be used as a general guide.

MAPS

The production maps are presented to show at a glance the distribution of various crop and livestock areas in the state.

*Includes 30,000 crates not marketed and excluded in computing value.

¹Preliminary.²Actual acres.

In 1942 North Carolina ranked first in the production of tobacco, sweet potatoes and lespedeza for seed. She leads the world in the manufacture of tobacco and chairs, and has more cotton mills than any other state. The largest hosiery mill in the world is located at Durham and the largest bright leaf tobacco market in the world is at Wilson, N. C.

A RURAL SCENE IN McDOWELL COUNTY

There are approximately 31,451,000 acres of land in North Carolina of which 18,845,000 acres or 59.9 percent are in farms.

There are 43 mountain peaks in North Carolina more than 6,000 feet high and 125 peaks 5,000 feet or over. North Carolina has 320 miles of shore-line on the Atlantic Ocean and approximately 3,000 square miles of coastal sound waters.

According to the 1940 United States Census, North Carolina's value of farms (land and buildings) was \$736,708,000. The average value per farm was \$2,647. The average value per acre was \$39.09. The value of implements and machinery was \$45,468,000.

DISTRIBUTION OF CULTIVATED LAND

In order that comparisons of density of cultivated land in North Carolina may be made with other parts of the United States the map at the right is offered. The darker the area, obviously, the more intensely the cultivated land, since the scale is one dot equals 25,000 acres of cultivated land.

This map was drawn from information secured by the U. S. Census, 1940, and is, therefore, the latest available. It is readily seen that North Carolina is not a densely cultivated area such as the corn belt from Ohio to Nebraska shows. A better picture of North Carolina's cultivated area may be found on page 4.

More detailed studies of the cultivated land in North Carolina occupied by each of the many crops, showing the diversification and distribution by counties, are available on succeeding pages.

More native minerals have been found in North Carolina than in any other state—about 289 species and sub-species. North Carolina leads the country in production of feldspar, mica and residual clays. She has the largest open-face quarry in the world, and the only tin mine in the United States is located in Lincoln County.

There were 127,476 automobiles, 20,621 motor trucks, 12,111 telephones and 71,196 North Carolina farm homes having electricity in 1940.

Bath, in Beaufort County, claims two distinctions. It is the oldest town in the State, being incorporated in 1705, and the oldest church, St. Thomas, Episcopal, was built there in 1724.

PEANUT PRODUCTION 1942

Robeson county is the largest of the 100 counties with approximately 990 square miles and Chowan is the smallest with an area of about 135 square miles.

Farm tractors have been greatly increased on North Carolina farms since the war started, but in January 1942 there were reported 17,620 usable tractors. There are approximately 7,000 farms with 100 or more cultivated acres of land.

Commercial fertilizers totaled 1,292,655 tons sold from July 1942 through June 1943 excluding cotton seed meal, limestone, gypsum and phosphate. This represents approximately a 4 ton average for each of the 300,000 farms in North Carolina.

SIZE GROUPING STUDIES OF THE 1943 FARM CENSUS

For many years it has been the desire of the Crop Reporting Service to develop its annual farm census information by size groups for the various counties.

The need of this is realized. Farmers usually think in terms of comparative size. For example, a two horse farmer is more interested in other two horse farm operations than in larger activities. The last legislature made it possible for the 1943 farm census to be developed through machine records permitting of maximum analysis, including size grouping of some 20 different features such as total land, cultivated land, idle, pasture, more important crops, and livestock, on a county basis.

IREDELL COUNTY

Iredell county was selected for the sample county. The results are being distributed in printed form to the various agricultural leaders throughout the state in order that they might determine which features would be most useful in their service. Other counties are being developed with the expectation that all counties will be completed by January, 1945. This type of study is new and original with North Carolina. While it may at first seem complicated, yet it is in line with the farmers normal thinking, and when once understood will solve many economic problems now facing agricultural leaders.

Several years ago a study was made of the Farm Census Report by size groups and the table above on "Corn" is a small sample of the type of information contained in the special issue. The new 1942 studies, however, are much more conclusive and provide comparative subject studies. Many things have been brought to light by these size group studies. For example, in the study of pasture and milk cows for Iredell county we found that 34 percent of the farms in the county have no milk cows; 40 percent have no pasture; 42 percent of the idle land in the county is found on these farms without cows; and 13 percent of the milk cows in the county are on farms without open pastures. If all the land now idle on these farms were converted into pasture it would not only provide grazing for the 13 percent of the cows now without pasture, but it would also furnish pasture for much needed increase in milk cows in the county. It is surprising and interesting that Iredell, a major dairy county, has such a large percentage of its idle land on farms where pasture is needed.

The special size group issue, which provides other just as surprising and interesting studies, will be sent to those requesting copies as long as the limited supply lasts.

SOYBEANS

Whereas the main soybean area is now in the mid-Western States, when the Crop Reporting Service was started 25 years ago, North Carolina was a principal producer, supplying seed for the present leaders. At that time, soybeans were grown primarily in coastal counties whereas now (see page 24) they are distributed throughout the State. The State's yearly increases are shown at the left, dating back to 1929. A graphic map distribution for North Carolina is shown below.

NORTH CAROLINA FIRSTS

North Carolina claims to have been the first state to officially:

1. Use cotton field boll counts for estimating yields—later adopted by other states. (1922).
2. Secure its annual farm census on a voluntary basis (1918-1921), after which the state law was enacted.
3. Have and use a threshers report act (1918).
4. Automobile meter measurements of crops (1924) with machine designed and first used by D. A. McCandless of Mississippi.
5. Use automobile in field investigation as part of crop estimates (1917-1918).
6. Issue a "Reporters News Sheet" as a medium of informal contact with voluntary reporters (1923).
7. Use statistical graphs or charts for interpreting county reports and measuring probable error or bias (1923).
8. Develop county size group studies of land uses and crops (1923).
9. Use the punch card machine tabulation of its farm census (1923), thus permitting maximum utilization and developments. This method is being used for studying the 1943 reports.

COWPEAS FOR PEAS PRODUCTION 1942

COWPEAS

While North Carolina is considered a primary cowpea producing State, in reality few are shipped or even sold in commercial quantities. Most producers grow enough for their own needs, with a little surplus. The map at the left gives the distribution resulting from the Farm Census. The uneven or erratic distribution may be due to misunderstandings of the way tax listers ask for the information needed, for the farmers may give total acres grown, total acres harvested for all purposes, or perhaps acreage harvested for beans alone, when latter was intended.

A GROWING SERVICE

A QUARTER CENTURY PROGRESS

It was just 25 years ago, a quarter century, that the Crop Reporting Service was inaugurated in North Carolina. It resulted as a post war measure to save both duplicated state and federal statistical efforts and to provide maximum working information for the various agricultural education and production agencies then at work. The wisdom of this foresight and cooperative endeavor has long been realized. Many new service features have been added as the needs became evident.

NOW

At the beginning of 1944 we find one of the most enviable state statistical offices. It is based on long experienced methods, surveys, records, broad experiences, detailed knowledge of county farm facts and this well known publication "Agricultural Statistics." This state is a generation ahead of other southern states through the yearly crop and livestock inventories taken by the tax listers each January. Of course, the AAA allotments, "measurements," and work sheets have aided tremendously in the farmers' thinking, but the Farm Census had North Carolina farmers already prepared for each of the farm relief to war production programs.

FARMER THINKING NOW

"As a man thinketh, so is he." This applies to farmers. Twenty-seven years of yearly farm inventorial thinking has reasonably developed statistical or comparative ability. They are thinking ahead, comparing with last year, shifting from doubtful to beneficial crops, studying reports and generally thinking for themselves and holding up their end of a discussion. This has been proven peculiar to North Carolina farmers. The only difference is the Farm Census and educational programs of the Crop Reporting Service. All agricultural agencies show that they recognize this one office as the official one for agricultural statistics. They take its clearing house services for granted as do county offices their accountants.

HEREAFTER

The year 1944 will be the most momentous in world history. This may apply to agriculture. Now is the time for post war readjustment planning. We must be prepared when the need arises. This must extend to county units. It must have the cooperation and support even down to individual farmers. To insure this the farmers must have a known and influential part. Past performances are the accepted evidence of equitable allotments or allowances, and the farmers' own estimates as shown in the Farm Census records are valuable. Hereafter as heretofore farmers will find this information a real friend in the time of need.

SURVEYS

Various surveys are made during the year including three by the rural mail carriers, the annual farm census by tax list takers, and many directly by mail from farmers. These minimize personal judgment and maximize probable or approximate actual acreages and livestock on a sample farm basis.

The farm census for example covers 95 percent of all farms or 286,000 individual farmer records. Such facts are the basis of the county figures used in this publication. The county commissioners and township list takers provide for these records. The Statistical Division of the Department of Agriculture assembles and publishes the county results.

A new feature or interpretation of these farm census records is being developed in 1943-44 in which county facts on SIZE grouping are shown. For example, of Iredell county's 3,969 farms reported only 66 percent had milk cows. Of these 2,618 farms with cows only 119 had 10 or more cows, of which 24 farms had 20 or more. These farms having 10 or more cows had an average of only 10 acres of open pasture. The 20+ cow farms averaged 38 acres. Many other similar size group studies are shown in the Iredell county sample sheet published early in 1944. This illustrates the unpublished facts available for other counties.

EXPLANATION OF STAR GRAPH

The drawing at the left illustrates in a patriotic way how the Crop Reporting Service is enabled to serve the various agricultural agencies.

The point at the top shows county commissioners as the number one source of information. This, of course, applies to the farm census. The bar going to the lower point labeled "Farm Census Reports" simply means that the county provides to the State Department of Agriculture the county facts on which the statistical services are based. Leading from this lower right point to the left we find quoted inventorial statistical facts which go from the Department to the service agencies which in turn develop the information into county program facts, utilizing most of this locally and providing federal and other agencies with their recommendations and factual information. Thus the agencies represented in the right hand star point are enabled to render better marketing information and other services to the various public business service agencies represented by point 5. These agencies in turn are afforded to develop aggressive business economies which come back to county commissioners and other agencies who again enter into the yearly service cycle.

VOLUNTARY REPORTERS

In much the same way the voluntary farm reporters all over the state submit to the Crop Reporting Service their judgment reports throughout the year. These reports enter into channels of exchange and service opportunities similar to those illustrated at the left.

1942	16	1.25	20

Shown at the top part of this page are seven tables showing the past thirteen years' figures on acreage, yield and production of several types of hay. On the opposite page shows the county figures in detail for three years for all tame hay. The map above pictures the distribution of hay produced in the various counties of the state. Thus at a glance the relative importance of each section may be noticed.

Due to dry and unfavorable conditions in considerable parts of the state last year more than the usual hay was brought into the state during the winter of 1943-1944. The intentions for 1944 hay production are considerably increased as may be noted on page 49. As will be seen above the acreage of hay has been tremendously increased during the last 15 years. The outstanding example is lespedeza hay.

The table on page 28 showing Tame Hay by Counties includes the following kinds of hay: Small grain cut green, cowpea, soybean and peanut hay, lespedeza and all other tame grasses cut for hay.

1923	2,260	1938	2,662

¹ Includes 475,000 bushels not harvested on account of economic conditions.

APPLES (COMMERCIAL AREAS)

Revised Estimates of Production. 1934-1942

YEAR	Production (000) Bushels	YEAR	Production (000) Bushels
1934	772	1939	21,331
1935	1,018	1940	21,118
1936	710	1941	1,669
1937	21,840	1942	1,086
1938	738	*1943	499

* Preliminary.

² Includes the following quantities not harvested on account of economic conditions: 1937—175,000 bu.; 1939—120,000 bu.; 1940—58,000 bu. Note: Statistics for total apple production are not available for the years subsequent to 1938 because of Congressional legislation which has restricted estimates of apples to the commercial crop. Commercial apple production is considered to be the production in areas of the 36 most important producing States.

POULTRY AND EGGS

The last table below shows chicks hatched in North Carolina and United States. For 1942 the state figure for North Carolina was not available but would be approximately 30,000,000. The April 1944 estimate is 40,000,000. Thus we find the amazing increase from the 2,500,000 chicks hatched in 1933 to 40,000,000 in 1943. On the other hand the number of eggs laid annually per hen shows only a slight increase and the production on farms only about 25 percent increase. Most of this increase is from commercial hatcheries rather than from farm flocks. Durham and Randolph counties form the main center of broiler production.

*1942 revised through June. Other months in 1942 and 1943 Preliminary.

WEATHER FACTS

Some claim that no state in the Union is more favorably situated with respect to climatic conditions than is North Carolina. The seasonal average temperature is 58 degrees in Spring; 75 in Summer; 60 in Autumn and 42 in Winter. The normal average precipitation is about 50 inches and is fairly uniformly distributed over the state throughout the year.

Temperatures rarely go as low as zero except in the mountain regions. During a normal winter the temperature may drop to 10 or 12 degrees F in the central districts but these are

of rare and short duration, just as during an average summer, maximum temperatures reach 100 degrees F on only two or three days.

The average date of North Carolina's last killing frost in the spring of 1943 was April 15. Not until November 12 had killing frosts visited all sections of North Carolina.

The Weather Bureau reported there were 5 more clear days than cloudy and partly cloudy days during 1943. There were ninety-two rainy days during the year.

*This information was collected and furnished by the Division of Farm Management and Cost—Bureau of Agricultural Economics.

¹ Preliminary.² Includes hauling and spreading manure.³ Includes threshing for wheat and oats.⁴ Includes twine, sacks, sheets, use of implements, use of storage buildings, overhead and a charge for expenses incurred on acres abandoned because of crop failure.⁵ Includes a charge for rent on the acreage not harvested because of crop failure.

WAR GOALS

On pages 46 and 47 will be found a table of county war production goals for 1944. These do not necessarily mean that these acreages will be produced but that they are feasible and have been approved by county war boards. In other words these are the goals set for farmers throughout North Carolina to harvest this year.

In determining these very careful studies of all available open cultivatable land were made together with known labor, farm machinery, soil type, farming practices and other economic factors. They at least provide a measure of production capacity.

POST WAR PLANNING

The war goals capacity provide a very definite measure for studying post war ability. However, the main problem will probably not be production ability so much as realization of world competition and planning to avoid as much of this as possible. Farmers and particularly farm leaders should anticipate all reasonable problems with the idea of avoiding as much competitive production as possible. Otherwise prices are likely to be too low to justify the effort.

Another likelihood is that America will not have a tariff wall for as much protective prices as have been heretofore. Thus we may expect to compete with other countries which will necessarily mean far lower standards and more effective practices than we have known in previous years. The isolation of American industries including farming has in no small measure been responsible for present war conditions. The high standards prevailing in the United States have resulted in jealousies and un-

friendly relations which must be radically reduced if we are to meet the democratic free relations now being promised.

Thus our post war planning is far more complicated and far reaching than most of us realize. We must not only study capacity for producing but the lowest possible cost of production. Otherwise we are going to find costs much greater than the ceiling price. Of course, the first essential is to plan for home needs and particularly farm needs, feeds and foods. Perhaps the greatest opportunity in the south is for livestock, for the simple reason that these provide a finished product that may be sold at any time of the year. In this way competition through the sale of raw farm products can be minimized while at the same time maximizing their utilization.

The North Carolina farmer must anticipate more processing of foods either by drying, canning or otherwise developing them into less perishable products.

GOTTON CROP ESTIMATES

DECEMBER 1, 1943

NORTH CAROLINA

COTTON CROP ESTIMATES

The chart at the left is provided to permit a better understanding of development of crop estimates. The December cotton estimates report is used. At the left of this illustration eight studies or cotton factors are shown. The first of these includes condition for which 741 reports were used and giving an indication of 608,000 bales. Due to the importance of this particular report a proportion or weight of 14 out of a 100 was used. In comparison with this is the third factor of "bolls safe" carrying a weight of only 7 percent of all the eight studies used. Even so, this gave an indication of 604,000 bales. The average of all eight studies showed about 601,000 bales in comparison with the government's adoption of 595,000 bales. These estimates must later be checked with the final ginnings released in May 1944. The noticeable part of this chart is the point at which all lines cross, indicating that such is in close agreement with the final estimate, thus establishing the reliability of each source.

STANDARD WEIGHTS AND MEASURES AND CONVERSION FACTORS

(FROM AGRICULTURAL STATISTICS 1942) AND DE LAYAL DIARY

COMMODITY	Unit	Approximate Net Weight Pounds	Unit	Approximate Equivalent	Rate of Seeding Per Acre
Alfalfa seed	Bushel	60			
Apples	Bushel	48	1 pound dried	7 pounds fresh	10-12 lbs.
Apples	Box	44			
Apples	Barrel	140	1 barrel	3 bushel basket	
Barley	Bushel	48	1 barrel (196 lbs.)	9 bushels	7-10 pks.
Beans, Lima, dry	Bushel	56	1 pound shelled	2 pounds unshelled	
Beans, Lima, unshelled	Bushel	32			
Beans, Snap	Bushel	30			
Beets, without tops	Bushel	52			
Beets, bunched	Western crate	55-60			
Blackberries	24 qt. crate	36			
Broomcorn	Bale	333			
Broomcorn Seed	Bushel	44-50			
Buckwheat	Bushel	48-52	1 barrel (196 lbs.)	7 bushels	4-6 lbs. 3-5 pks.
Butter	Tub	63			
Cabbage	1½ bu. hamper	50			
Cantaloups	Standard 45 crate	60			
Carrots, without tops	Bushel	50			
Carrots, bunched	Western crate	55-65			
Cherries, without stems	Bushel	60-64			
Clover Seed	Bushel	60			8-10 lbs.
Corn, ear, husked	Bushel	70			
Corn, shelled	Bushel	56	1 bushel	2 bushels husked ear	6-10 lbs.
Corn, green, sweet	Bushel	35			
Corn, meal	Bushel	50	1 barrel (non-degermed)	4 bushels corn	
Cotton	Bale, gross	500	1 pound ginned	2.86 pounds unginned	
Cotton	Bale, net	478			
Cottonseed	Bushel	32			1-3 bu. 6-8 pks.
Cowpeas (drilled-solid)	Bushel	60			
Cream, 30 percent butterfat	Gallon	8.43			
Cucumbers	Bushel	48			
Dewberries	24 qt. crate	36			
Eggplant	Bushel	33			
Eggs, average size	Case, 30 dozen	45			
Flaxseed	Bushel	56	1 bushel	2½ gallons oil	
Flour, various	Barrel	196			
Grain Sorghums	Bushel	50-56			
Hickory Nuts	Bushel	50			
Honey	Gallon	12			
Hungarian Millet Seed	Bushel	48-50			
Kafir	Bushel	50-56			3-6 lbs.
Kale	Bushel	18			
Lard	Tierce	375			
Lettuce	Western crate	70			
Milk	Gallon	8.6			
Millet	Bushel	48-50			20-25 lbs.
Molasses	Gallon	11.75			
Oats	Bushel	32			8-10 pks.
Onions, dry	Sack	100			
Onions, green, bunched	Crate	50-55			
Onions, sets	Bushel	28-32			
Orchard Grass Seed	Bushel	14			
Parsnips	Bushel	50			
Peaches	Bushel	48			
Peanut Oil	Gallon	7.5			
Peanuts, unshelled, Virginia	Bushel	22	1 pound shelled	1½ pounds unshelled	
Peanuts, unshelled, Runners	Bushel	28			
Peanuts, unshelled, Spanish	Bushel	30			
Pears	Bushel	50	1 pound dried	5½ pounds fresh	
Peas, green, unshelled	Bushel	30	1 pound shelled	2.5 pounds unshelled	8-12 pks.
Peas, dry	Bushel	60			
Peppers	Bushel	25			
Plums	Bushel	56			
Popcorn, on ear	Bushel	70			
Popcorn, shelled	Bushel	56			
Potatoes	Bushel	60			10-15 bu.
Quinces	Bushel	48			
Raspberries	24 qt. crate	36			
Redtop Seed	Bushel	14-40			10-15 lbs.
Rice, rough	Bushel	45			
Rice, milled	Bag	100			
Rutabagas	Bushel	56			6-8 pks.
Rye	Bushel	56			8-15 lbs.
Sargo, seed	Bushel	50			
Sargo, sirup	Gallon	11.4			
Soybeans (drilled-solid)	Bushel	60			6-8 pks.
Spinach	Bushel	18			
Strawberries	24 qt. crate	36			
Sudan Grass Seed	Bushel	40			
Sugar Cane Sirup	Gallon	11.25	1 gallon	5 pounds sugar	
Sunflower Seed	Bushel	24-32			
Sweet Potatoes	Bushel	55			
Timothy Seed	Bushel	45			4-10 lbs.
Tobacco, flue-cured	Hogshead	900-1,100			
Tobacco, Burley	Hogshead	1,000-1,200			
Tomatoes	Bushel	53			
Turnips, without tops	Bushel	54			
Turnips, bunched	Crate	60-80			
Velvetbeans, hulled	Bushel	60			
Vetch	Bushel	60			
Walnuts	Bushel	50	1 pound shelled		
Watermelons	Average size melon	25			
Wheat	Bushel	60	1 barrel	4.7 bushels	6-8 pks.

TROY WEIGHT

24 grains	=	1 pwt.
20 pwts	=	1 ounce.
12 ounces	=	1 pound.

AVOIRDUPOIS WEIGHT

27 11-32 grains	=	1 dram.
16 drams	=	1 ounce.
16 ounces	=	1 pound.
100 pounds	=	1 cwt.
2,000 pounds	=	1 short ton.
2,240 pounds	=	1 long ton.

DRY MEASURE

2 pints	=	1 quart.
8 quarts	=	1 peck.
4 pecks	=	1 bushel.
36 bushels	=	1 chaldron.

LIQUID MEASURE

4 gills	=	1 pint.
2 pints	=	1 quart.
4 quarts	=	1 gallon.
31½ gallons	=	1 barrel.
2 barrels	=	1 hogshead.
1 teaspoonful	=	1-6 ounce.
1 tablespoonful	=	1-6 ounce.
16 fluid ounces	=	1 pint.

SQUARE MEASURE

144 sq. inches	=	1 sq. foot.
9 sq. feet	=	1 sq. yard.
30½ sq. yards	=	1 sq. rod.
43,560 sq. feet	=	1 acre.
40 sq. rods	=	1 rood.
4 rods	=	1 acre.
640 acres	=	1 sq. mile.
160 sq. rods	=	1 acre.

LAND MEASURE

10 rods x 16 rods	=	1 acre.
5 rods x 32 rods	=	1 acre.
4 rods x 40 rods	=	1 acre.
5 yards x 968 yards	=	1 acre.
20 yards x 242 yards	=	1 acre.
40 yards x 121 yards	=	1 acre.
220 feet x 198 feet	=	1 acre.
110 feet x 396 feet	=	1 acre.
60 feet x 726 feet	=	1 acre.
300 feet x 145.2 feet	=	1 acre.
4,840 square yards	=	1 acre.

MEASURE OF LENGTH

4 inches	=	1 hand.
7.92 inches	=	1 link.
18 inches	=	1 cubit.
12 inches	=	1 foot.
6 feet	=	1 fathom.
3 feet	=	1 yard.
5½ yards	=	1 rod or pole.
40 poles	=	1 furlong.
8 furlongs	=	1 mile.
1,760 yards	=	1 mile.
5,280 feet	=	1 mile.
320 rods	=	1 mile.

NUMBER OF PLANTS TO ACRE

Distance Apart ¹	Number of Plants	Distance Apart ¹	Number of Plants
3x3 in.	696,960	6x6 ft.	1,210
4x4 in.	392,040	6½x6½ ft.	1,031

Watermelon	May, June	1 oz.	2 in.	6 ft.	4 ft.	3-4 months

NOTE: The calendar above should be used as a general guide. The dates for planting and harvesting will vary according to locality and local weather conditions.

1944 OUTLOOK

The March Reporters' acreages of 1944 crops are shown below. The AAA farm plans for this year also show considerable increase of crop land, thus largely verifying the Crop Reporting Board survey.

The AAA survey is based on practically all farms, whereas the Crop Reporting Service estimates were derived from about 2,500 farmers' judgments of their own and community intentions to plant.

On the other side of the picture March weather conditions were unfavorable. Rains were too frequent to permit of adequate plowing and land preparation. Field work in the clay soils of the central counties was held up by soils too wet to work. Early planted potatoes were rotting in the ground and new plantings delayed. Freezing temperatures came about the 22nd with some damage to fruits.

Small grains were looking good except the stands were below normal because of unfavorable fall seeding conditions.

Farm labor is a real problem. Many farms report idle work stock for lack of someone to use them. Fertilizer sales, however, were greater than 12 months earlier, when conditions were much more advanced. Transient or floating farm labor is lacking, because of the 16 unit and other deferment holding requirements.

Some claim that farmers will plant all they can, but with considerable certainty that all crops cannot be harvested. Farm labor is quite elastic. Hours can stretch from 8 or 10 to 12 or 15 per day. "Overtime" during emergencies on farms is a recognized part of the farm work program. Farmers are as loyal and patriotic as any group, but even if they do endure more discouraging working conditions than other productive groups, there are reasonable and human limits.

Perhaps the four percent increase in total crop acreage for North Carolina reflects considerable "hopes and requested goals." The attractive tobacco prospects will encourage real efforts to increase that crop by 18 percent.

The favorable increase in rationed farm machinery for 1943 and 1944 provide advantages, but all the 21,000 tractors on farms will care for only a small percentage of the crop land.

While the war will probably continue on into 1945, much thought and planning will be done during 1944 toward post war readjustments. This should also be given serious thought by individual farmers and certainly by county agricultural leaders. A primary idea will be regarding crops and livestock, that will probably continue stable and required. Those of doubtful local need should be considered on a surplus basis. The wisest growers will figure out certain crops that are likely to be overlooked, in local demand, offering little competition, and otherwise be safe, with a strong chance of ready demand.

This is the year to get ready for later economies. Savings of all kinds should be practiced against that certain day of need.

UNITED STATES

The reports received indicate that a great many farmers in all parts of the country realize they individually are faced both by a shortage of feed for the numbers of livestock and poultry on their farms and by a tight labor situation that will not be extensively relieved by the new machinery that will be available in time for this year's crops. There seems to be a general fear that there will be an inadequate supply of the labor needed during short periods for harvesting certain crops which are dependent on seasonal labor.

¹ Yield of Cotton lint in pounds.

² Includes some quantities not marketed and excluded in computing value.

CUTTING BARLEY IN IREDELL COUNTY

The comparison of the 1942 revised figures and the 1943 preliminary figures as shown above gives the increase of the needed war crops. Since the 1943 figures are not revised, some crops may show even a greater increase in acreage and yield.

Many of the commercial truck crops show a large increase, proving that 1943 was more than a normal crop year for many of these. The estimates for 1944 North Carolina truck crops will be somewhat less than the 1943 figures. Due to the demand for the crops that were short in 1942 and 1943, an increase is expected in this year and probably a decrease in some of the surplus crops in 1943.

* The values shown are for the marketing season or crop year and should not be confused with calendar year incomes. Tobacco prices and values for 1943 available by States only until April.

¹ Yield of Cotton lint in pounds.

² Actual acres shown for Commercial Truck.

THRESHING WHEAT IN HENDERSON COUNTY

As of April 1944, the Crop Reporting Service has several representatives in the armed forces; in fact, all of our younger men are new since two years ago. Thus, in spite of the essential nature of the statistical services required, exemptions were not requested. Long experience is as essential in crop estimates and statistical reporting as in other exacting services. Familiarity with ALL farm crops, livestock, work, seasons, chances, dangers, farmer thinking, and influences of weather, prices, etc., is essential and requires long experience even by farm-reared men in relation to collecting, assembling, and interpreting agricultural statistics for best farmer services. Such qualifications are reasonably rare under 1944 conditions.

These conditions are partly responsible for the late release of this issue. Efforts are being made to mail the next (1944) issue next fall.

KEY TO REPORT RELEASES

A —Acreage-Seeded—Wheat and Rye	I —Intended Planting of Principal Crops (Excluding Cotton)
B —Bees and Honey	K —Lespedeza Seed Production Forecast
C —Cotton	L —Livestock
D —Dairy Manufacturing	P —Prices, Agricultural
F —Farrowing—Spring and Fall Pig Crops and Prospective Farrowings	R —Acreage and Production of Crops
G —General Crop Report—Condition, Indicated Yield, and Current Information	S —Stocks on Hand
H —Hatchery Report	T —Turkeys
	V —Vegetables and Truck
	W —Wage Rates

EXPLANATION OF KEY LETTERS

The key letters at the left and the green ones on the calendar indicate the dates on which the various crop and livestock reports are released by the U. S. Department of Agriculture at Washington, D. C. For example, on June 9th there will be three reports released as follows: **G**—General Crop Report; **V**—Vegetable and Truck Report, and **H**—Hatchery Report. Copies of these reports relating to North Carolina may be secured without cost by writing to the Agricultural Statistician, Box 2779, Raleigh, N. C.
