ANNUAL ISSUE 1945

FOREWORD

To the thousands of citizens of this State who are eager to revise their store of information on what North Carolina is accomplishing on the agricultural front, we present this 1945 issue of Agricultural Statistics.

Prepared at a great expenditure of time and money, this bulletin should not be regarded as merely a mass of figures, but as a detailed study of what our 300,000 farmers contributed to the winning of the war and peace in a critical period in the history of this State and Nation.

Virtually every day in the year we have requests for the material contained in this bulletin. It is eagerly sought and followed, not only by farmers, but by the

firms closely associated with agriculture and by people who wish to obtain a quick view of farming as it is done in North Carolina. By listening to the needs of these groups we have steadily improved this bulletin and broadened the scope of its influence.

We regard Agricultural Statistics as a book of 10,000 pictures of the various aspects of agricultural activity, and a careful analysis will present them to you in clear perspective.

So it is with great pride and pleasure that we submit herewith our latest, and finest, edition of Agricultural Statistics.

Sincerely,

W. KERR SCOTT, *Commissioner.*

TABLE OF CONTENTS

	Page
1945 Monthly Weather-Crop Review for North Carolina	3
North Carolina Crops, Revised Estimates for 1943-1944 and preliminary 1945	4-5
United States Crops, Revised Estimates for 1944 and preliminary 1945	6
Individual and Total Values of eleven principal crops 1944 with county rank in total value 1943 and 1944	7
TOBACCO—County estimates, by belts, 1943-1944	8
Season's auction warehouse sales, by belts, 1941-1942 to 1944-45	9
Comments—Tobacco Production in United States 1945	9
Estimated number of barns for flue-curing tobacco in North Carolina 1944	9
COTTON—County estimates 1943-1944	10
Commercial fertilizer used on cotton 1944 and 1945 compared with other southern states	11
Cut—A short picture story of cotton from field to bale	11
Cotton ginned in North Carolina, by counties, 1938-1944	11
PEANUTS—County estimates, Revised 1942-1943, preliminary 1944	12
MAPS—1944 acreage distribution of Tobacco, Cotton, and Peanuts with bar charts giving production of same from 1914-1945	13
CORN—County estimates 1943-1944	14
WHEAT—County estimates 1943-1944	15
OATS—County estimates 1943-1944	16
MAPS—1944 acreage distribution of Corn, Wheat, and Oats with bar chart giving production of same from 1914-1945	17
SOYBEANS for Beans, County estimates 1943-1944	18
LESPEDEZA for Seed, County estimates 1943-1944	19
TAME HAY—County estimates 1943-1944	20
MAPS—1944 acreage distribution of Soybeans, Lespedeza, and Tame Hay	21
IRISH POTATOES—County Estimates 1943-1944	22
SWEET POTATOES—County Estimates 1943-1944	23
Estimated cost per acre for producing Corn, Wheat, Oats, and Cotton in North Carolina, 1925-1944	24
MAPS—1944 acreage distribution of Irish and Sweet Potatoes with bar charts showing production 1914-1945	25
Comments—1945 Summary of Acreage and Production in North Carolina and the United States	25
Map showing Soil types and principal crops grown in North Carolina	26-27
North Carolina Cash and Gross Farm Receipts, by commodities, 1925-1944 with table showing Total Income, Government Payments, and Value of Products consumed on farms 1925-1944	28-29
North Carolina Farm Production, Disposition and Value of Crops—revised 1943—preliminary 1944	30
Circle graphs showing sources of income distribution 1939 vs. 1944	30
Farm Production—Disposition and value of Fruits and Nuts in North Carolina 1909-1944	31
Cut—1945 Field travel investigation map	31
Quarterly and season's average prices received by North Carolina farmers for principal crops and fruits—1910-1945	32-33
Estimated County Prices 1944—Fruits, Small Fruits, and Pecans	34
Cut—Home Garden Scene	34
Rank of North Carolina Counties with other counties in United States	35
TRUCK CROPS—Monthly Carlot Shipments of Fruits and Vegetables in North Carolina 1944 Season	36
Comments—1945 Commercial Truck Crops	36
Usual Dates of Planting and Harvesting Truck Crops for Fresh Market	37
Acreage, Yield, and Production (1934-43 average) and Principal Areas of Production	37
LIVESTOCK AND LIVESTOCK PRODUCTS—Revised Estimates of Livestock Numbers in North Carolina and United States, 1933-1944, Preliminary 1945	38
Farm Production, Disposition and Income from Meat Animals in North Carolina 1928-1944	38
North Carolina Livestock Numbers Reported to State Board of Assessments, 1942-1944	39
Spring and Fall Pig Crop Reports—By States and Geographic Divisions—June 1945-December 1945	40
Comments—1945 Pig Crop in North Carolina and United States	40
DAIRY PRODUCTS—Quantity Sold, Price and Value, Value of products consumed and gross income in North Carolina 1924-1944	41
Production and Disposition of Milk and Milk Products in North Carolina 1924-1944	41
Quarterly average milk production, 1926-1944	41
North Carolina Manufactured Dairy Products, 1926-1944	41
POULTRY AND EGGS—Number Chickens on North Carolina Farms and Production, Disposition, and Cash Receipts from Sales 1925-1945	42
Number Layers and Egg Production—Monthly, 1925-1945	42
Turkeys—Numbers and Value—Farm Production—Disposition and Income 1929-1945	42
Egg Production, Disposition, and Value, 1925-1944	43
Monthly Egg Production per 100 layers, 1925-1944	43
Chicks Hatched by Commercial Hatcheries—North Carolina and United States—Monthly—1938-1945	43
Comments—North Carolina Poultry Industry	43
Quarterly and season's average prices received by North Carolina Farmers—Livestock and Poultry—1910-1945	44
Estimated County Prices—Livestock and Poultry, 1944	45
North Carolina Farm Census—Land Utilization and Miscellaneous Data	46-47
Number Farms, Total land in Farms and average size of farms in North Carolina (1945 United States Census—preliminary) with 1935-1940 comparisons	48
Comments on Farm Increases in North Carolina	48
Rainfall in North Carolina—monthly and season, 1915-1945	49

DATA FOR YEARS 1925-1945

NUMBER 88

1945 MONTHLY WEATHER--CROP REVIEW FOR NORTH CAROLINA

JANUARY: Rainfall was below normal in the Piedmont and Coastal Plains but about an inch and a half above average in the Mountains. For the State as a whole, the temperature averaged around two to two and a half degrees below normal. While January is generally the coldest month in the year, there are usually short periods which are favorable for some field work. This year, however, the temperature was consistently cold and decidedly unfavorable for outside work. Grain crops made little progress but held up satisfactorily despite the cold weather.

FEBRUARY: The temperature, which was above normal during February, followed a winter of rather steady cold weather. While rainfall during the winter months was below average, rains were relatively frequent during February and most soils remained too wet for spring plowing. With the abundance of moisture and above average temperatures, grain crops "greened up" considerably. Clovers and pastures made splendid progress. Some varieties of peaches showed considerable pink with occasional trees approaching full bloom which is early for North Carolina.

MARCH: The temperature was 2 degrees warmer than for any previous March on record, in fifty-seven years, according to the Weather Bureau at Raleigh. However, rainfall was lower than for any March on record with the exception of 1910 when an average of only 1.1 inches fell during the month. Even with this deficiency of rainfall the soils were still too wet to plow and most planting was limited to the sandy soils in the eastern section of the State. Small grains, though backward, had excellent stands and showed good vitality. Due to the acute labor shortage at harvest, much cotton and corn had to be left in the fields over the winter and in some cases cotton was plowed under. Tobacco plant beds made excellent progress and plants were ready for transplanting at an earlier date than usual. Indications for a decrease in the acreage of food and feed crops were evident from the reports received during the month.

APRIL: April began with the most forward spring in the State's history. Evidence of the earliness of the season this year was shown in leaf growth—normally trees are in full leaf about May 10, but this year trees reached this stage a month earlier. Too, just at the point of the soil becoming too dry, good rains occurred, which made conditions for spring plowing and planting favorable, and farmers began to catch up with their outside work. The freezes on April 4, 5, 6 caused little damage in the three eastern districts, but hurt fruits and small grains in the Piedmont. Apples in the western counties were considerably reduced and a very short crop was indicated. Strawberries were two to three weeks early and marketing began much earlier than usual in the Wallace and Chadbourne areas. Other truck crops were well advanced. Pastures were reported at 90 percent and furnished good grazing. The average milk production per cow stepped up to 11.6 pounds on April 1, compared with 10.9 pounds in March and 10.9 pounds April 1, 1944.

MAY: Cool weather and less than average rainfall retarded the growth of most crops. Tobacco stands were reported better than average in most areas, but growth was slow during the month and considerable "buttoning out" was reported. Although a record crop of oats is expected, other grains have been sharply reduced. The stands and growth of corn were irregular. Farmers had trouble in getting a stand and considerable replanting was necessary. While peach prospects declined slightly, a good crop was anticipated from the Sandhill area, where the major portion of North Carolina's commercial peaches are grown. Early April cold weather thinned the unusually heavy set of peaches and caused an abnormally heavy drop but left a very good set of peaches. The State's commercial apple crop was nearly wiped out by the April freeze except in the Brushy Mountains and in a few favorably located orchards in other mountain counties. Harvest of early potatoes and snap beans in the southeast rose to peak levels and a light movement of cucumbers had started by June 1 and harvesting of the spring cabbage crop was completed. Some trucking areas in the eastern part of the State were handicapped by

lack of adequate rainfall. Lettuce suffered most. Cold weather delayed planting of the mountain snap bean and cabbage crops.

JUNE: The mountain counties were quite dry during June, affecting pastures, fruits and vegetables. Drought conditions prevailed in the Piedmont, affecting all crops. On the brighter side, a good soaking rain was received in all truck crop sections in the eastern sections on June 8. Cool weather and lack of rainfall retarded hay crops. Early peaches failed to size up as expected and the cool weather during May held back the development of later varieties. On June 2, a severe hail storm occurred in the heavy producing Candor-Norman area of the Sandhills and seriously damaged around 400 cars of peaches. All indications point to a reduction in this year's wheat crop. Combining of wheat was in progress in the east and getting underway in the main Piedmont area. A shortage of labor and unfavorable weather conditions reduced the acreage planted last fall, and adverse conditions during the spring season resulted in a larger than average proportion of the planted acreage being used for grazing, hay, and other purposes.

JULY: It is wonderful what changes a rain can make. Of course, the April freeze has not been forgotten—nor the effects eradicated. Then, the cool May offset the advantages gained by the unusually early season, but the general rains completely reversed the gloomy prospects of a week earlier, and the resulting crop growth was almost miraculous. After coming through a dry June, crops—particularly those in the western half of the State—were badly in need of rain. General rains started throughout the State early in the month and lasted long enough to be excessive in most Coastal Plain counties. Rainy days and wet fields prevented farmers from properly cultivating their crops so that as July closed grass was becoming a serious crop hazard. Although grassy peanut fields, excessive plant growth in cotton, and rapid ripening of tobacco were detrimental, corn, hay crops, and pastures showed improvement during the month. Growers experienced considerable difficulty in getting a stand of cotton. As a result, the percentage of the acreage that had to be replanted was probably the highest on record. North Carolina farmers used, during the past fiscal year, 1,163,563 tons of mixed fertilizers compared with 1,152,863 tons during 1943-44 and 1,055,089 tons during 1942-43.

AUGUST: Temperatures throughout the month of August were about normal, without pronounced hot waves or cool spells. The first frost of the autumn season occurred on Mt. Mitchell (altitude 6711 ft.) on the 27th. While frequent rainfall over the eastern counties hampered farm operations until near the close of the month, and moderate to heavy amounts resulted in soggy soil conditions, many localities in the central and western Piedmont were suffering from near-drought conditions. Growing conditions were good for hays, pasture, corn, and lespe-deza. Peanuts, soybeans, and sweet potatoes had too much rain for setting "fruit." Livestock fared well in view of excellent pastures, abundant feed crops, and plenty of drinking water. With tobacco ripening usually fast and with rains hindering harvest and field work, farmers were unable to keep the crop suckered as in pre-war years when labor was plentiful. Worms were especially troublesome. The cotton crop made good progress in Piedmont counties but rains were excessive in the eastern half of the State and plants became somewhat "weedy." Although weevil infestation was comparatively high in some localities, damage, as of August 1, had been considerably less than anticipated. Stands were fair to good.

SEPTEMBER: Although prospects at the beginning of September, except for the wet condition in localized areas, were for maximum harvest under near-ideal weather conditions; yet, at the end of the month, serious losses had occurred as a result of excessive rains that accompanied the tropical storm which swept across the central part of the State about mid-month. The most serious loss was in hay crops, for much of it had been cut and was still on the ground when the rains came. Rivers and streams flooded, and many fields were inundated. Most of the flooded farm land consisted of pasture,

and loss of crops from the floods was not as heavy as was first thought. Great damage resulted from continued wet soils in the peanut growing areas in the northeastern counties. Some damage occurred to corn and other crops in the Piedmont being blown down by the strong winds which attended the passage of the hurricane. Tobacco was practically all harvested in the flue-cured belt with a near-record crop. The weather was unfavorable to cotton in that it hindered proper growth and fruiting, and prevented the use of insecticides. Immature bolls were heavily punctured by weevils. By the end of the month, blooming was completed.

OCTOBER: October was a quiet month with light rains, moderate temperatures and an abundance of sunshine, making conditions favorable for all outdoor activities. A late crop of hay was secured under favorable harvesting conditions; the preparation of land for seeding winter grains proceeded rapidly; and good stands of early-sown grains were reported from some localities. Cotton picking and ginning made excellent progress, with weather conditions better suited to cotton than at any time during the season. No freezes occurred and damaging frosts were limited to the mountain areas. Despite the damage suffered from the tropical storm during mid-September, prospects on October 1 continued to point toward a record yield of corn for North Carolina, and production was expected to be larger than any other corn crop ever produced in the State. The harvest of peanuts was well underway during October, but progress was slow due to shortage of labor, grassy conditions, and the shattering of nuts. Although German prisoners of war and imported Bahamian labor were used, the supply was not sufficient to adequately meet the demand.

NOVEMBER: On November 5, the first general frosts and freezes prevailed. Most fall farm work was completed and general winter improvements started. The 6 or 7 weeks of favorable weather, starting in mid-September, made it possible for harvests and fall seeding to be completed although labor continued to be scarce. Most small grains were sown early enough in the fall for good growth and root development. There was plenty of soil moisture at the time of seeding and continued favorable weather gave these crops a good start. The pasture condition of 81 percent on November 1 is one of the highest on record for the same date. The excellent fall weather and late frost kept grass green much longer than usual. The average production of 12.2 pounds per milk cow was exceptionally good for the time of the year. Indications still point to the largest corn crop ever produced in the State. This increased production is the result of various conditions such as deep rooted growth, favorable weather since June, better cultivation practices, and the use of better seed, including hybrid.

DECEMBER: The weather for December 1945, was in marked contrast with the two preceding months. There were frequent rains, heavy in many localities. By the end of the month the rivers in eastern Carolina were out of their banks, but with little damage resulting. A continuous flow of cold air from the sub-Arctic regions of Canada into the State for a period of two weeks caused this to be the coldest December since 1935. The feature of the month's weather was the severe ice-storm which struck the western Piedmont and the adjacent Mountain counties on Christmas Eve. The greatest damage was reported from the vicinity of Spartanburg, South Carolina, northeastward across Cleveland County and into Iredell County. Farming was practically at a standstill during December on account of the existing weather conditions. Some fear was expressed that fruit trees were frozen but this was largely limited to peach trees, since most other fruits endure much colder weather. Some unpicked cotton was still in the fields since little could be picked during the month. This was one of the least profitable crops of 1945. Many peanuts were left stacked in the fields and were deteriorating from exposure. Almost no threshing or picking was done during the past month. With 1946 just around the corner and with the rapid return of war veterans to rural areas of North Carolina, the farm labor problem is not as acute now as in the past. However, there is still a shortage of hired farm laborers due to the high competitive urban offerings.

NORTH CAROLINA CROPS

REVISED ESTIMATES FOR 1943-1944 AND PRELIMINARY 1945

CROPS		Acreage Harvested			Yield Per Acre			Unit of Measure	Production

TOBACCO PRODUCTION IN THE U. S. 1945

Total production of tobacco in 1945 is estimated at 2,042 million pounds, a new high record. This total compares with the 1944 crop of 1,956 million pounds. The acreage planted to tobacco was larger in most States this year than last, while average yields per acre were generally below last year. The few States where acreages were smaller than in 1944 were those where plantings were reduced by unusual difficulties at planting and setting time. Approximately 57 percent of the production was flue-cured and 31 percent was light air-cured. Fire-cured, dark air-cured and all cigar classes accounted for only about 12 percent. This distribution of production among the tobacco classes will provide relatively more tobacco for cigarette makers than for other manufacturers.

The 1945 production of flue-cured tobacco, was 1,175 million pounds, compared with 1,090 million in 1944. This year's crop is slightly larger than the record 1939 crop of 1,171 million pounds. Blue mold in plant beds and cold, rainy weather in the early season held the acreage increase to only 6 percent above 1944. Warm, dry weather in June was conducive to development of a good root system and also provided opportunity for cultivation. Early September was warm and ideal for priming and curing.

The Burley crop met some serious obstacles in the early season. Blue mold was severe in many plant beds, and cold weather in the spring retarded progress. Dry weather followed and became acute in Kentucky, but rains fell in time to bring about substantial recovery in most localities. The present estimated production—603 million pounds—exceeds last year's record output by about 2 percent.

¹ Data for 1945 are preliminary.² Includes New Mexico, Arizona, California, Illinois, Kansas, and Kentucky.

Estimates of the total acreage of cotton receiving commercial fertilizer and the total tonnage and value of commercial fertilizer used in cotton production represent calculations based on these data and the Crop Reporting Board's estimate of acreage in cultivation on July 1.

NORTH CAROLINA

With the abundance of moisture and above average temperatures during the growing months, most grains and pastures got off to a very favorable start during the early part of 1945 and, although the freeze which occurred during April damaged crops to some extent, the prospects for abundant feed and food crops materialized with almost record crops in most cases.

Taking everything into consideration, 1945 was particularly good for corn, hays, potatoes, and pasture, and new production records were established in North Carolina for corn, oats, and tame hay. Wet weather reduced the yields of some crops, especially peanuts. The tobacco growers realized good returns despite lower yields than were expected. Increased acreage and high prices made these good returns possible. Most crops sold for good prices; the mountain cabbage crop was one of the exceptions. The farmer, in general, had another successful crop year.

There is always some disaster to review. The September storms caused the flooding of approximately 20,000 acres and wet weather damage to about 10,000 acres. Considering the total crop acreage of the state, this is only a small part of one percent. The fact that this is so small a percentage does not, however, reduce the injury to those who had a large part of their total crop destroyed in this manner.

Farm labor is still reported as scarce and hard to get at any price. The use of prisoner of war labor was helpful, but this assistance was not adequate to meet the demands during the harvest season. Recent strikes and demand for organized high wages are having effects on farm labor.

UNITED STATES

Crop production in the United States in 1945 turned out to be the third largest on record. Higher yields on acreage that was the second largest since 1932 accounted for this outstanding achievement in face of numerous handicaps of adverse weather, insects, diseases, etc. always experienced in one section or another by those engaged in farming. For the nation as a whole, the spring planting season was one of the worst ever recorded for late planted crops, the late spring and early summer growing season was the coolest in more than two decades and there were damaging frosts in the late spring and early fall. On the brighter side, moisture reserves and rainfall were adequate for most of the country and while cool weather retarded the development of some crops it was excellent for filling small grains and for hays and pastures.

A wide variation occurred in the outcome of individual crops. New production records were established for wheat, oats, tobacco, rice, popcorn, hops, peaches, pears, grapefruit, almonds, and truck crops for fresh market. Either near record or very large crops of most other food and feed crops were harvested. Except for 1921 the production of cotton was the smallest since 1896. Production of apples, sour cherries, maple sirup, and maple sugar was the smallest on record.

(A) HIGH MOUNTAIN SOIL: ASHE, PORTERS AND CLIFTON LOAM.

(B) APPLES, BUCKWHEAT, BUNCH GRAPES, HAYS, IRISH POTATOES, AND VEGETABLES.

(A) MOUNTAIN SOIL: PORTERS, STONY LOAM; CECIL AND HAYESVILLE CLAY LOAM.

(B) APPLES, BUCKWHEAT, BUNCH GRAPES, BURLEY TOBACCO, CLOVER, FLOWERING BULBS (ON CONGAREE), GRASSES, IRISH POTATOES, OATS, RYE, VEGETABLES, AND WHEAT.

(A) RED CLAY LOAMS AND SANDY LOAMS: CECIL AND HAYESVILLE; NORFOLK AND CECIL.

(B) ALFALFA, APPLES, BARLEY, COTTON (IN LOWER PIEDMONT), COMPEAS, GRASSES, LESPEDEZA, PEACHES, RYE, SOYBEANS, TOBACCO, TRUCK AND VEGETABLES, AND WHEAT.

(A) ROUGH STONY LAND AND ROCK OUTCROP.

(B) NOT SUITABLE FOR GROWING CROPS.

(A) SANDY AND CLAY LOAMS: APPLING, CECIL AND HELENA; GEORGEVILLE AND HERNDON.

(B) BLACKBERRIES, BUNCH GRAPES, CANTALOUPS, COTTON, COMPEAS, DEWBERRIES, PEACHES, RYE, SWEET POTATOES, TOBACCO, VEGETABLES, AND WATERMELONS.

(A) CLAY AND CLAY LOAM: CECIL, GEORGEVILLE AND PORTERS.

(B) ALFALFA, BARLEY, COTTON (IN LOWER PIEDMONT), CLOVERS, GRASSES, LESPEDEZA, OATS, PEACHES, RYE, SMALL FRUITS, VEGETABLES, VETCH, AND WHEAT.

(A) BLACK JACK SOILS: CECIL CLAY AND HELENA SANDY.

(B) ALFALFA, BUNCH GRAPES, CLOVERS, COTTON (IN LOWER PIEDMONT), GRASSES, LESPEDEZA, OATS, RYE, VEGETABLES, AND WHEAT.

(A) SLATE SOILS: GEORGEVILLE AND HERNDON SILTY LOAM WHITE STORE AND NORFOLK SANDY LOAM.

(B) APPLES, COMPEAS, CLOVERS, GRASSES, LESPEDEZA, OATS, PEACHES, RYE, VEGETABLES, AND WHEAT.

(A) GRAY SOILS FROM SANDSTONE: CECIL AND WHITE STORE SANDY LOAM; GEORGEVILLE SILTY CLAY.

(B) BLACKBERRIES, CANTALOUPS, COTTON (IN LOWER PIEDMONT), COMPEAS, DEWBERRIES, LESPEDEZA, OATS, PEACHES, RYE, TOBACCO, VEGETABLES, AND WATERMELONS.

(A) RED SOILS FROM SANDSTONE: GEORGEVILLE SILTY CLAY LOAM.

(B) APPLES, BLACKBERRIES, BUNCH GRAPES, DEWBERRIES, GRASSES, LESPEDEZA, OATS, RYE, VEGETABLES, AND WHEAT.

(A) SECOND BOTTOM SOILS: NORFOLK SANDY LOAM.

(B) BLACKBERRIES, BUNCH GRAPES, COTTON, DEWBERRIES, GRASSES, LESPEDEZA, OATS, PEANUTS, RYE, SOYBEANS, SWEET POTATOES, VEGETABLES AND WHEAT.

(A) SANDHILLS: NORFOLK SAND.

(B) BLACKBERRIES, BUNCH GRAPES, CANTALOUPS, DEWBERRIES, MUSCADINES, PEACHES, RYE, SWEET POTATOES, TOBACCO, VEGETABLES, AND WATERMELONS.

(A) WELL TO FAIRLY WELL DRAINED SANDY LOAMS AND SILT LOAMS: NORFOLK, DUNBAR AND PORTSMOUTH.

(B) BLACKBERRIES, BUNCH GRAPES, CANTALOUPS, COTTON, COMPEAS, DEWBERRIES, PEACHES, PEANUTS, PECANS, RYE, SOYBEANS, STRAWBERRIES, SWEET POTATOES, TOBACCO, VEGETABLES, AND WATERMELONS.

(A) SANDS: NORFOLK AND PORTSMOUTH.

(B) BLACKBERRIES, BUNCH GRAPES, CANTALOUPS, DEWBERRIES, MUSCADINES, PEACHES, RYE, SWEET POTATOES, TOBACCO, VEGETABLES, AND WATERMELONS.

(A) POORLY DRAINED SANDY LOAMS, LOAMS AND SILT LOAMS: NORFOLK AND PORTSMOUTH; MUCK AND PEAT.

(B) GRASSES, IRISH POTATOES, LESPEDEZA, OATS, PEANUTS, SOYBEANS, STRAWBERRIES, SWEET POTATOES, AND VEGETABLES.

(A) SWAMPS AND FIRST BOTTOMS: PEAT, MUCK.

(B) FOR PART WELL DRAINED—GRASSES, IRISH POTATOES, SOYBEANS AND VEGETABLES.

KEY: (A) MAIN SOIL TYPES. (B) PARTICULARLY WELL SUITED TO THE GROWING OF CROPS LISTED.

(SINCE CORN GROWS WELL IN EACH COUNTY OF THE STATE, IT IS NOT LISTED SEPARATELY)

* The values shown are for the marketing season or crop year and should not be confused with calendar year income.

1 Seed not shown separately, combined with "Fed to Livestock."

2 Feed and Fertilizer.

3 Feed, Seed and Fertilizer.

4 Fed and lost.

5 Estimates for the commercial crop relate to apples produced in commercial apple areas of North Carolina and include produced for sale to processors as well as for fresh consumption.

* Excluding the value of Irish and sweet potatoes.

* Not one of first 100 counties in the nation in tobacco production but ranked 95th in tobacco acres harvested.

In 1940 the United States Census picked the first one hundred leading counties in the nation for selected agricultural items and since North Carolina is well represented in many of the tables a list of the counties with the respective rank is given above. Space does not permit the complete list but the more important items are given.

Chatham County ranked 38th in the number of chickens raised on farms. In the "Value of Farm Products Sold, traded or used

by farm household," Johnston ranked 45th; Pitt 59th; Robeson 50th. Camden, Pasquotank and Beaufort counties ranked 95th, 58th and 99th, respectively in the acres of Soybeans for beans. Duplin was 80th in the acres of sweet corn harvested for sale.

It is interesting to note that only 22 counties in North Carolina failed to appear in any one of the items listed by the Census and ten of these counties are located in the mountainous section of the State.

The total of sales of North Carolina's principal commercial truck crops in 1945 was estimated at \$17,372,000. This is about \$5,500,000 more than the ten-year (1934-43) average value of \$9,199,000. The value per acre of sales is estimated at \$211 compared with \$135 in 1944 and the ten-year average of \$96 per acre. Gross per acre receipts showed increases in 1945 over 1944 for all crops except cabbage, lettuce, and strawberries.

USUAL DATES OF PLANTING AND HARVESTING BY SEASONAL GROUPS, 10 YEAR AVERAGE (1934-43) ACREAGE, YIELD AND PRODUCTION AND SHOWING PRINCIPAL PRODUCTION AREAS OF THE STATE

—SEASONAL GROUPINGS—

Jan.	Feb.	March	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
EARLY WINTER							EARLY SUMMER				
		LATE WINTER						LATE SUMMER			
			EARLY SPRING						EARLY FALL		
				LATE SPRING						LATE FALL	

MARKETING SEASONS

Most commercial truck (vegetable) crops must be grown when the market demands warrant best prices. Thus, seasonal plantings and crops must be considered and reported on. To provide an easier grasp of these, the boxed headings at left are shown in relation to the monthly planting and harvest data given below.

—USUAL DATES OF PLANTING AND HARVESTING—

	Jan.		Feb.		March		April		May		June		July		Aug.		Sept.		Oct.		Nov.		Dec.		Unit	10 yr. Av. (1934-43)			Principal Areas of Production (County or Area)
	Plant	Harvest	Plant	Harvest	Plant	Harvest	Plant	Harvest	Plant	Harvest	Plant	Harvest	Plant	Harvest	Plant	Harvest	Plant	Harvest	Plant	Harvest	Plant	Harvest	Acres	Yield		Production (000)			
Lima Beans (Summer)-----						1-15					20		30											Bu. (32 lbs.)	1,370	49	68	Pender, Duplin, Sampson	
Snap Beans (Late Spring)-----					10		10		15				10											Bu. (30 lbs.)	8,430	61	503	Mt. Olive & Wilmington Area and Columbus, Chowan, Onslow, Currituck

Carrots (Summer)-----			1-15								1		31											Bushel (50 lbs.)	120	169	19	New Hanover	
Cucumbers (Late Spring)-----						1-30					1		20											Bushel (48 lbs.)	3,900	74	286	Sampson, Duplin, Pender, New Hanover, Columbus, Cumberland, Wayne, Chowan	
Lettuce (Early Spring)-----	15		10				1	31																Crates (70 lbs.)	1,250	78	96	New Hanover, Pender	
Peas (green) (Early Spring)-----	10		20				1	31																Bushel (30 lbs.)	2,770	60	171	Sampson, Duplin, Beaufort, Pasquotank	
Peppers (green) (Early Summer)-----						15-30					20			31										Bushel (25 lbs.)	1,695	180	301	Sampson, Duplin, Pender, New Hanover, Wayne	
Potatoes (com'l early) (Late Spring)-----			1	10					15				20											Bushel (60 lbs.)	35,840	138	4,987	Beaufort, Pamlico, Tyrrell, Carteret, Pitt. Also Elizabeth City and Mt. Olive areas.	
Strawberries (Mid Spring)-----			1-28	1-31			10	31										15				1-31		Crate (24 qts.)	6,210	86	534	Duplin, Pender, Sampson, Columbus, Wayne	
Tomatoes (Early Summer)-----				20		30				10		31												Bushel (53 lbs.)	1,460	66	93	Carteret, Scotland, Robeson	
Watermelons (Early Summer)-----						5	5						1		25									Melons	10,510	210	2,202	Scotland, Robeson, Hoke, Wayne, Sampson, Duplin, Chowan, Currituck	

DEFINITIONS AND EXPLANATIONS

The data as presented relate only to those truck crops and areas of production covered by the official estimates of the Bureau of Agricultural Economics, U. S. Department of Agriculture, under the caption "Commercial Truck Crops for Fresh Market."

The "Group and State" is the grouping used by the Bureau in preparing official estimates of acreage, yield, and production to show the seasonal sequence of supplies. The chart at the top of the page shows approximate periods covered by each seasonal group and sub-grouping.

The "Usual Dates" are intended to indicate that period in which the main part of the crop is planted and harvested in most seasons, but may exclude exceptionally early or exceptionally late dates of light planting or harvesting. It is not intended to include unusual extremes in individual seasons.

The "Planting" period shown covers the time when crops usually are planted in the field. In the case of crops grown from seed without transplanting, it is the period in which the seed is planted. "Seed" is used in a broad sense and includes tubers, bulbs, etc. For transplanted crops, the planting period shown is the period when they are set in the fields.

The "Harvesting" period designated is the period when crops are picked, cut, pulled, dug, or otherwise harvested. In the case of most crops, the harvesting period coincides closely with the marketing period. For storage crops such as beets, cabbage, and carrots, the marketing season in some areas may extend several months past the harvesting period.

The "Principal Areas of Production" as given are intended to include all of the important areas, but to omit many minor producing sections. It is believed that sufficient territory is included so that anyone can take a map showing county outlines and locate the chief producing areas for the various crops. For this reason, areas are mostly designated by counties, however it may be that production is restricted to only a part of the county or district named.

REVISED ESTIMATES OF LIVESTOCK NUMBERS IN NORTH CAROLINA AND THE UNITED STATES

REVISED 1933-1944 PRELIMINARY 1945

NORTH CAROLINA

Reports from thousands of North Carolina farmers collected cooperatively by the local rural mail carriers for the Crop Reporting Service of the Federal and State Departments of Agriculture, indicated that the combined spring and fall pig crops for the state totaled 1,142,000 head for 1945. This is about 336,000 head smaller than the 1944 crop of 1,478,000 head and 151,000 head smaller than the 10-year average of 1,293,000 head. The 1945 fall pig crop was estimated at 544,000 or 13 percent smaller than the 1944 fall crop of 624,000 head. Reports from breeders indicated that 85,000 sows farrowed during June 1 to December 1, 1945. This is 14 percent smaller than the 99,000 sows farrowing in the fall of 1944.

Farmers' reports on breeding intentions for the spring of 1946 indicate that 105,000 sows will farrow during the 6 month period ending June 1, 1946. This is 10,000 head or 11 percent larger than the 95,000 sows farrowing during the spring of 1945 but 9,000 head or 8 percent less than the 10-year average spring farrowings of 114,000.

If breeding intentions are carried out and the number of pigs per litter should be the same as the 10-year (1934-43) average, the 1946 spring crop in North Carolina will total about 630,000 head or 32,000 head more than the 598,000 produced in 1945 but about 56,000 head smaller than the average spring pig crop during the last 10 years.

UNITED STATES

Yearly Pig Crop: The combined spring and fall pig crop of 1945 is 86,714,000 head, practically the same as the combined crop of 1944, but 29 percent smaller than the record crop of 1943. Compared with last year, the crop in the Corn Belt is 4 percent larger and for the States outside the Corn Belt it is 11 percent smaller. The rather sharp increases in the crop in most of the Western Corn Belt States, while other regions showed no change or decreased, tended to bring the proportion of the total in the Western Corn Belt back toward the pre-drought level.

Spring Intentions: Farmers' reports on breeding intentions for the spring season of 1946 indicate that 8,542,000 sows will farrow in that season. This number is about 4 percent larger than the number that farrowed in the spring of 1945, about 9 percent above the 10-year (1934-43) average and 30 percent below the record number in 1943. Increases are indicated for all regions except the North Atlantic.

NORTH CAROLINA POULTRY INDUSTRY

The production of poultry has rapidly become one of North Carolina's most important farm enterprises. A few years ago farmers in this State derived only a small part of their cash farm income from poultry and prior to 1933 the cash income from poultry amounted to approximately one-fifth of the sum received in 1943 or 1944.

Perhaps the war, with a greater demand for poultry by the government, has been one of the main factors in bringing about this increase.

The amount of cash income derived from broiler production alone has gradually increased each year from \$492,000 in 1935 to approximately \$11,000,000 in 1943, which is the highest on record.

The cash income derived from chickens in 1938 amounted to \$10,381,000, as compared with \$43,934,000 received in 1943 and \$42,624,000 received in 1944. This amount has surpassed the cash income derived from hogs, sheep, cattle, or any other live-

stock enterprise on North Carolina farms today.

For the year 1945, the output of chicks by commercial hatcheries was 37 percent greater than the 1944 output and seven percent above 1943, which was the record year of production prior to 1945. At present the demand is fairly high for chicks for general farm flock replacement and bookings indicate a good demand for broiler chicks.

NUMBER OF FARMS INCREASE IN N. C.

1945 U. S. CENSUS REVEALS TENDENCY TOWARD MORE BUT SMALLER FARMS IN STATE

North Carolina gained 12,902 farms and 124,289 acres in farmlands during the past five years, it is shown in preliminary figures of the 1945 Agricultural Census released by the Census Bureau.

The number of farms in North Carolina's 100 counties increased by 4.6 per cent during this period. Acreage in farms, however, climbed only seven-tenths of one per cent.

This means, the Census Bureau pointed out, that the trend in North Carolina is toward more but smaller farms.

Nash County gained over 1,000 farms, jumping from 4,941 farms in 1940 to 5,943 in 1945. However, 762 acres in the county went out of farming.

Second biggest gainer was McDowell County, showing an increase of 907 farms, and third, Robeson County, with 816 farms. Robeson gained 62,000 farm acres and McDowell gained 37,000 farm acres.

On the other side of the picture, Granville County showed a loss of 396 farms and 38,000 farm acres; Surry, 727 farms and 15,000 acres.

Wake County showed a gain of 688 farms over the five-year period. The number climbed from 5,255 in 1940 to 5,943 at present, and farm acreage went up by 36,184, from 383,326 in 1940 to 419,510 in 1945.

OTHER COUNTIES

Among other counties in North Carolina gaining in farms are the following:

Chatham, 3,173 farms in 1940 to 2,805 farms in 1945 and 315,934 acres in 1940 to 315,934 acres in 1945; Durham, 1,476—1,476 farms and 111,384—114,050 acres; Edgecombe, 3,156—3,646 farms and 266,397—260,038 acres; Franklin, 3,630—4,145 farms and 257,023—265,465 acres; Harnett, 4,349—4,522 farms and 240,759—254,539 acres; Johnston, 7,646—7,818 farms and 401,516—413,120 acres; Lee, 1,620—1,716 farms and 112,727—118,568 acres; Nash, 4,941—5,948 farms and 276,808—276,046 acres; Randolph, 4,230—3,631 farms and 376,602—353,611 acres; Vance, 2,179—1,882 farms and 148,885—147,445 acres; Wayne, 4,378—4,896 farms and 250,349—273,564 acres; and Wilson, 4,118—4,773 farms and 201,000—203,511 acres.

WEATHER DATA

Maps and illustrations provide more interesting and better remembered ideas than mere figures. For instance, the heaviest (upper) 1945 rains occurred in the USUAL or 25-year heavy rain areas shown on the bottom map. It will also be observed that over the 25-year period that the least rainfall occurs in the upper piedmont and Madison County area.

The lowest and highest rainfall is found near together, Highlands in Macon County more than 80 inches annually (lower map) and shows Marshall in Madison County less than half as much.

"AS THE STATISTICIAN SEES IT"

Perhaps in none of the 27 years existence of the Agricultural Department's Statistics Division and the consequent State-Federal (Cooperative) Crop Reporting Service has any year provided more for statistical history than has 1945 in North Carolina.

PUBLICATIONS

The issue of "Agricultural Statistics" for 1945 is the official voice of the Crop Reporting Service in North Carolina. As in the past, a tremendous amount of work has necessarily been carried on throughout the year in preparation for this publication and a summation of the monthly and special reports from January through December has been prepared herewith. Several new features have been added and other important data have been enlarged upon and brought up-to-date.

TIME SAVER

Less time has been spent in assembling data requested by mail due to the fact that most of the information asked for was contained in our publications. Fewer request for information were received during the past year, primarily because of the wide distribution of our publications among the agricultural public. Two extra requests were handled which required much research and many calculations. This information was requested by one of the largest radio stations and one of the largest newspapers in the state, and was used in selling North Carolina's agricultural possibilities to several large national advertising firms.

WEEKLY WEATHER REPORTS

One of the most popular and helpful new services developed during 1945 was the weekly Weather-Crops Report. This feature was developed in cooperation with the U. S. Weather Bureau and dealt with the effects of the prevailing weather on crop conditions.

SPECIAL SURVEYS

Nine sample personal visit surveys were conducted in several counties during 1945. Four of these concerned quarterly farm wage rates and labor requirements. The reports were collected by personal contacts on the farms. The other five special studies were of a similar nature requested by the War Food Administration to determine damage to truck crops in order that the proper price adjustment could be determined.

POULTRY REPORTS

The commercial poultry weekly reports were developed for several central counties. This new feature has grown in importance due to the enormous demand for poultry by the armed forces as well as civilians. This will be expanded to state-wide scope during 1946.

FILING SYSTEM IMPROVED

The statistical filing system requiring numerical and subject index folders for more than 30 farm drawer sections besides the 28 years' farm census report files covering 1,037 townships, was revised up to date during the past year. Thus, perhaps this state has its files in the best shape of any in the nation.

STATISTICS SERVE PUBLICITY NEEDS

The editor of the State Department of Agriculture voluntarily stated in a radio address in December that our agricultural statistics services were outstanding in 1945. He had previously stated that perhaps half of his news stories came from the statistics office which is but one of the department's 17 divisions. Local speeches and programs are developed from the statistical data available.

SOUTH'S INSTITUTE OF STATISTICS

The Institute of Statistics at State College faces 1946 as being the foremost such agency in the WORLD. Its 1945 work in Experimental Statistics and conspicuous support by President Frank Graham of the University of North Carolina and also the Rockefeller General Education Board are recognized and commended nation-wide. Miss Gertrude Cox, in charge, has achieved an outstanding success.

ACTIVE FIELD INVESTIGATIONS

The approximately 34,000 miles of field investigation travel took the statisticians into all parts of the state, from Currituck to Cherokee and from Ashe to Brunswick Counties. The map found on page 31 illustrates this comprehensively.

VOLUNTARY REPORTERS

The lists of voluntary reporters reached an all time high with approximately 32,000 individuals contributing reports without any expectation of pay. This does not include the tax listers who do receive pay for their work.

REPORTING STATISTICS

During 1945, 370 reports were developed from an aggregate of 67,336 voluntary crop reporters representing 81 separate groups. The farm census included 319,886 individual farm reports containing 34 farm features which represent about 94 percent of all farm land. Relative to the reports from operations of 6,961 combines and threshing machines ideal county yield reports on 9 separate crops were obtained.

PAN-AMERICAN TRAINING

The Pan-American "good neighbor" policy for helping Latin American statisticians understand and put into practice our proven methods was a major privilege given to North Carolina as evidence of her high standing with the U. S. Department of Agriculture. During the past year, four South American young men, sent to America by their government, spent several months, each working with the Statistical Division in order to get first hand knowledge of the procedures and many advantages of the shortcuts used in developing the best in agricultural information.

TECHNICAL ASSISTANTS LOST

We lost such personnel as Mr. J. J. Morgan, Agricultural Statistician to become Secretary of the Cotton Reporting Board at Washington; Mrs. Elma Wyrick, in charge of the farm census office; Mr. Homer Culbreth, Census Supervisor; and, several expert clerks. Without anyone experienced in this work to replace them, a serious situation arose right when the needs for efficient, regular, and EXTRA services were needed.

VETERAN RETURNS

On the bright side, Mr. Russell P. Handy recently returned to the N. C. Statistics Division after serving 31 months in the Finance Division of the Army with 19 months service in the European Theater of War.

LEGISLATIVE FIGHT

The legislative bill, presented in January, 1945, to abolish the existing 25-year Farm Census Law, "failed to reach first base" as one proponent stated. Actually, many advantages were gained. These include clarification of purposes, uses and values of these services to counties. That there is no other agency so economical or practical, or even available for such yearly all-farm surveys, was clearly evident. That improvements and expansion are justified was outspoken. That Governor Cherry, who strongly requested counties to cooperate until a satisfactory substitute is developed, is obvious of the situation.

RECONVERSION

After four years of increasingly trying war labor conditions, the return of veterans is noticeably relieving the situation. Since private employers would pay so much more than COUNTY, state and federal government agencies, the chief sufferers are obvious. Each such office felt that it was affected more than others. Blame for these trying conditions was placed most conveniently. Selfishness has crept into our thinking and acting, which, in salary cases, has generally resulted in disappointments and criticisms. Fortunately, this is showing long needed improvement.

COUNTY FARM DIGESTS

After much study, research, and experimenting with various types and methods of presenting county and township information in the most comprehensible form, a standard 24-page study of individual counties has finally been developed in the North Carolina Statistical Division recently and has been named "County Farm Digest." The popular features are the illustrations and visual interpretations or *digests* of both the county and TOWNSHIP information, secured yearly through the County Commissioners and tax listers.

The first counties selected were Nash, Guilford, Lenoir, Buncombe and Mecklenburg. Expressions from other counties, based on their impressions of these first results, warrant all speed ahead for their own Digest publications. However, without adequate funds or personnel for these 30-35 man day work requirement tasks, results will be necessarily slow in appearing.

To justify any such development, assurances must be submitted, showing that each County Council (USDA) unanimously requests this with the intent of using and promoting its appreciation within the county.

Personal contacts were made in January with Council members of about fifty counties, and their overwhelming interest is in the early completion of such Digests for their counties. As they stated, "this is the long felt and needed service we must have for our present and future programs."

The State Office is prepared to go "all out" for maximum services in the way of preparing the foundational summary information for counties and townships, working materials, working space, printing machinery and costs, paper and transportation which about equal the extra clerical costs needed to prepare this material into the county Digest publications concerned.

VETERAN STATISTICIAN BACK

The return of Mr. W. F. Callander to head up the USDA statistics work in Washington is of conspicuous importance. He retired three years ago as head of the U. S. Crop Reporting Board. For two years he was statistician for Florida when the U. S. Census Bureau secured him to head up their agricultural work for 1946 including their farm census enumeration. On January 1, 1946 he became one of the four assistant chiefs of the BAE in charge of all statistical divisions.

COMMISSIONER SCOTT ACTIVE

Commissioner W. Kerr Scott has done a fine job in the defense and promotion of his agricultural statistics office. Such an attitude indicates its worthwhileness. In fact all agricultural agencies are dependent on his department for county farm statistics which have now become the working unit in North Carolina, with TOWNSHIP studies right ahead.

The 1945 year ended with conditions favorable for the greatest accomplishments and best COUNTY services during 1946. The only hold up will be in funds and competent office personnel.

NORTH CAROLINA RANKS HIGH

Texas and California are the only two states officially rated higher than North Carolina, yet neither of these have a farm census, threshers records, tobacco sales, or peanut cleaner reports. The next states to us are Illinois, Wisconsin, and New York. Neither of these have the number of farms, diversity of crops, or multiplicity of growing and harvesting practices. Thus, North Carolina probably has more statistical problems and practices than any other state.

WASHINGTON CONFERENCE

In late February of 1946, a group of ten outstanding statisticians from various states from California to New York and Dakota to Texas were called to Washington, D. C. to confer on improvements in agricultural statistics' developments. It was evident that considerable increases in services are needed. Congressional approval was indicated.

North Carolina showed up quite well in comparison with all others. In fact, most of the improvements planned have been in vogue here for many years. Several services familiar to North Carolinians are quite new to other states. For example the "Farm Digest" studies mentioned in the left column. Our Farm Census is rated among the best in its development. Law compliance is deemed essential elsewhere; whereas, we have employed cooperative methods for insuring local interest and compliance.

ACKNOWLEDGMENT

The North Carolina Crop Reporting Service appreciates and gratefully acknowledges the cooperation and material aid given by the many individuals, county and state agricultural leaders, and governmental agencies in supplying the essential and basic county and state farm information contained in this publication. We especially wish to thank the many thousands of progressive farmers throughout North Carolina who contributed so materially to the foundational basic information used in developing most of the county data. Also, to the State News Service of the Department of Conservation and Development and to the News Service of the Extension Department at State College, we extend our sincere thanks for many of the fine illustrations used throughout the publication, including the front cover.

AERONAUTICS vs. STATISTICS

EACH PROVIDES:

LONG, CLEARER VIEWS AHEAD.

FORESIGHT AND WIDE SCOPE OF
VISION OR PERCEPTION.

SENSE OF PROPORTION.

COMPARABILITY AND RELATION-
SHIPS.

EACH IS:

MODERN, IMPRESSIVE, SPEEDY, CAPA-
BLE OF SHORT-CUTS YET BEYOND THE
UNDERSTANDING OF SOME BECAUSE OF
UNFAMILIARITY.

NEITHER USES SET TRACKS. BOTH
AVOID ROUNDABOUT, LONG ROUTES
AND RELY ON SOUND JUDGMENT FOR
DEPENDABILITY. YEARS OF EXPERI-
ENCES HANDLING GIVES CONFIDENCE
TO BOTH THE CREW AND THOSE SERVED.
ECONOMICAL RESULTS ARE OBTAINED
BECAUSE OF SPEED, COOPERATION,
SHORT-CUTS, AND CHARTING METHODS.

ABILITY TO ARRIVE QUICKLY MEANS
MUCH. BOTH START OUT DEALING
WITH THE UNKNOWN, PERHAPS FLY
BLIND FOR A WHILE, YET LAND "ON
THE BEAM."

PRACTICAL, PROVEN METHODS EM-
PLOYED GIVE DEPENDABLE RESULTS AND
PROVIDE "SAFE ARRIVAL" AND VALU-
ABLE USAGES.
