AGRICULTURAL STATISTICS

Featuring

REVISED CORN COUNTY ESTIMATES
1925-1952

Third Quarter

September 1954

FOREWORD

This issue of **NORTH CAROLINA AGRICULTURAL STATISTICS** is the third in a series of quarterly publications started in 1954 to supplement the annual publications.

Along with an increasing demand for basic agricultural data has come numerous requests for more detailed information in the publication of county estimates on a "more current basis". This publication features corn county estimates for North Carolina from 1925 through 1953. It is hoped that these data will provide individuals and agencies with useful historic information that has been collected through the State Farm Census and from volunteer crop reporters and disseminated by the North Carolina Crop Reporting Service.

The importance of the contributions made by

volunteer crop reporters throughout the State in making possible the original information on all phases of crop and livestock production in this State cannot be over emphasized. The original information supplied by volunteer reporters, along with the information collected through the annual State Farm Census, is reviewed, summarized and evaluated by the Crop Reporting Service staff and the results made available through releases to all farmers and the general public.

Commissioner of Agriculture

THIRD QUARTER

NUMBER 97

NORTH CAROLINA CROP REPORTING SERVICE

Crop and Livestock Reporting is a service rendered to the farmers in our State by the U. S. Department of Agriculture in cooperation with the North Carolina Department of Agriculture. Recognizing the many advantages of a joint relationship between the State and Federal Governments in the development of agricultural statistics, North Carolina, thirty-five years ago, entered into a cooperative agreement with the Federal Department of Agriculture to provide detailed agricultural statistics which are so vital to the economy of the State. This agreement resulted in the creation of the Crop Statistics Division, of the N. C. Department of Agriculture, which is popularly known as the North Carolina Crop Reporting Service.

Most of the basic information on production, supplies and prices of farm products in North Carolina, is collected and analyzed by your Crop Reporting Service. Whether you get information about production of crops and livestock direct from your State Statistician, your County Farm Agent, or from newspapers or radio, just remember that these facts come from your Crop and Livestock Reporting Service. The information comes first, through farmers, county officials, merchants, ginners, mills, elevators and warehouses, hatcherymen, dairy plants, meat packers and many others in the State who provide this information free of charge as a public service. These people are essentially the backbone of the Crop Reporting Service and should be given full credit for their worthy contribution to the interest of our State and Nation.

The question sometimes arises as to why crop and livestock reports are needed. The following are just a few of the many reasons:

(1) A man's judgment is no better than his facts, and crop and livestock reports are the basic facts of Agriculture.

(2) They aid farmers in planning their production and marketing.

(3) They are essential in enacting wise legislation affecting Agriculture.

(4) They are the basis for analysis of agricultural and other business conditions.

(5) They enable railroads to make a better distri-

bution of cars for moving farm products.

(6) They are a check on fluctuation in price. Uncertainty of supply promotes undue fluctuation in price.

(7) They are indispensable in times of war because food is as essential as ammunition and weapons of war.

(8) They are the best basis for adjusting supply to demand which is highly essential if maximum price is to prevail.

(9) They aid farm organizations, schools and others in planning constructive programs, and the prospective purchaser of land.

(10) They eliminate the ill effects of misleading reports that might be circulated for private gain, if there were no official reports.

(11) They are a guide to farm resources and for developing new resources such as irrigation, electric power, location of food processing and other factories.

(12) They reduce the amount of speculation in farm products. Speculation thrives on uncertainty. Unbiased official crop and livestock reports reduce uncertainty which limits speculation.

(13) They indicate potential buying power, thereby enabling the manufacturer to meet the probable demand. With economical production and distribution, the manufacturer can sell at a lower price than he could with uncertain demand.

The rapid increase in the number of publications mailed to individuals and concerns in North Carolina and in other States who are interested in North Carolina agriculture reflects the growing need and the vast uses that are being made of crop and livestock estimates. During last year 733,000 copies of releases were mailed to recipients, the largest number of record, being almost 20 percent above the number mailed the preceding year. In addition to circulation given to our statistical material through direct mailing, newspapers scattered throughout the State give wide coverage to the information contained in these reports. Through these mailed releases and through publicity given by newspapers, practically everyone in the State has immediate access to the large number of official estimates released by the Crop Reporting Service.

SOURCE OF CASH RECEIPTS FROM SALE OF CROPS
1953, NORTH CAROLINA

SOURCE OF CASH RECEIPTS FROM SALE OF
LIVESTOCK AND PRODUCTS 1953, NORTH CAROLINA

* Includes fruits, seed, soybeans, hays, forest products and various other crops.

The 1954 flue-cured tobacco crop in North Carolina is forecast at 923,920,000 pounds as of September 1. A crop of this size would be nearly 11 percent greater than the 832,305,000 pounds harvested in 1953.

Despite a rather dry season, yields in the Types 12 and 13 are still expected to be record or near record high for 1954. The Type 11

yield is currently forecast at 1225 pounds -- about 20 percent above the 1953 yield.

The above photo shows part of the bright leaf crop being sold in the Type 11 Area. As shown by the chart at the top of this page, tobacco is by far the most important cash crop in North Carolina. It accounted for about 67 percent of total cash receipts from crops in 1953.

U. S. COMMODITY HIGHLIGHTS

Prices of hogs will tend to be somewhat lower seasonally until about late October. They will be below last year but generally at or above a normal relation to the price of corn. Prices of grass cattle also are expected to decline seasonally, but will likely continue as high as or higher than last year because of a generally strong demand for feeder cattle. Prices for fed cattle may remain comparatively stable. Output of milk in August was slightly under that of a year earlier, the first time in 24 months.

Large production of eggs for this time of year and seasonally increasing supplies of poultry meat are holding down prices for these commodities.

Cash corn prices continued to advance during August and early September, and prices of other feed grains strengthened from low points reached in July. Cash wheat prices have advanced gradually and currently are near the highest levels of the season to date.

A 1954 cotton crop of 11.7 million running bales was forecast, down 28 percent from the 1953 crop.

Auction prices for flue-cured tobacco through September 17 averaged lower in all belts except the Middle and Old belts of North Carolina and Virginia, where drought was a serious factor last year.

A typical scene in the Sandhills area during July with peach harvesting in full swing. Tar Heel growers produced about 1,150,000 bushels of peaches during 1954 -- this was 30,000 bushels below the 1953 crop. The crop was damaged to some extent by cool weather

during the early spring. However, more favorable weather during the growing season helped size the crop set and off-set to some extent damage done by the cool weather.

1954	Not available											

Tar Heel farmers, in some sections of the State, are utilizing their improved pastures extensively and efficiently in producing pigs now. North Carolina's 1954 spring pig crop was the second largest of record. Pigs saved from spring farrowing totaled 1,018,000 -- 5 percent below the record 1952 crop of 1,071,000 pigs.
