NORTH CAROLINA

Agricultural Statistics

PEANUTS

Featuring County Estimates, 1925-1959

JANUARY - 1961

FOREWORD

This publication, which is devoted entirely to peanuts, is the third in a series to be issued for each major crop produced in North Carolina. It has been prepared in response to a sharp increase in the number of requests for historical information on crop acreages and production at the county level.

County estimates on the acreage, yield, production, price and value of peanuts from 1925 through 1959 are shown on pages 6 through 19. Statistics at the State level on the acreage, yield, production, price and value of peanuts start with 1909 and are shown on page 3.

The publication of these data is made possible through a special project whereby State funds are matched with Federal funds received from the Agricultural Marketing Service, U.S.D.A., under provisions of the Agricultural Marketing Act of 1946.

PRODUCTION OF CORN IN NORTH CAROLINA

Corn is produced in each of the State's 100 counties. The area planted to corn varies from a few acres in Dare County to several thousand acres in a majority of the counties in the Coastal Plains. Tar Heel farmers have always planted more corn than any other crop.

Prior to the advent of farm mechanization the crop was utilized primarily on farms where produced as food for home consumption and as feed for work-stock and other livestock. Today, almost half of the crop is sold through commercial channels and less than one percent is consumed as food on farms producing corn (see table above).

Farm Disposition Of Corn,
1930 and 1960, North Carolina

Disposition	Percent of Total Production	
	1930	1960
Feed and Seed	85.1	52.1
Farm Household Use	7.2	.5
Sold	7.7	47.4
TOTAL	100.0	100.0

RECORD HIGH ACREAGE IN 1899

The spread between the acreage planted to corn and other crops has steadily increased since 1926, the year in which the record high acreage of cotton was harvested. During recent years corn has accounted for about one-third of the total harvested acreage of all crops. The record high all corn acreage was harvested in 1899 with 2,726,000 acres. Following 1899, and prior to World War I, the acreage trended downward to 2,280,000 acres in 1916. It increased to 2,510,000 acres in 1917. After 1917 the acreage gradually moved down to 1,985,000 acres in 1929, the lowest point since

PRODUCTION OF CORN (Cont'd.)

1875, when 1,990,000 acres were harvested, (see page 3). From 1930 through 1960 the acreage remained fairly stable -- ranging from a high of 2.5 million acres in 1935 to a low of 1.8 million acres in 1957 and 1958. The 1961 acreage is expected to be the lowest of record. The preliminary estimate for 1961 is for 1,530,000 acres of all corn and 1,400,000 acres to be harvested for grain. The reduction in acreage for 1961 is attributed primarily to participation in the Feed Grain Program. According to the ASCS State Office North Carolina growers placed 511,000 acres or 26 percent of the State's base acreage of corn in the Feed Grain Program.

PRODUCTION DOUBLED IN 25 YEARS

Tar Heel farmers almost doubled the production of all corn in 25 years and did it on significantly less acreage. In 1935, production of all corn totaled 47 million bushels from 2,478,000 acres. Production during 1960 totaled 91 million bushels from 1,902,000 acres -- 23.2 percent less acres than in 1935, but an increase in production of 93.6 percent.

The increase in the production of corn for grain has been equally as significant as the increase for all corn. In 1934, production of corn for grain totaled 41 million bushels from 2,343,000 acres. Production during 1960 totaled 84 million bushels from 1,750,000 acres -- 25.3 percent less acres than in 1934 but an increase in production of 105 percent.

All Corn: Average Acres Harvested and Total Production By Crop Reporting Districts, 1958-1960, North Carolina

DISTRICT*	ACRES HARVESTED		PRODUCTION	
	Average 1958-60	Percent of State Total	Average 1958-60	Percent of State Total
1	53,997	2.8	2,464,167	2.9
4	78,273	4.1	3,733,700	4.4
2	168,523	8.8	6,168,500	7.2

*Mountain, Districts 1 and 4; Piedmont, Districts 2, 5 and 8; Coastal, Districts 3, 6 and 9.

COMMERCIAL CROP IN COASTAL PLAINS

Although corn is produced in every county in the State, the commercial crop is produced pri-

marily in the Coastal Plains. At the time corn acreage allotments were in effect most of the coastal counties were designated as 'commercial corn counties'. During the crop years 1958 through 1960 the coastal districts (3, 6 and 9) accounted for an average of 72 percent of the acreage and for 75 percent of the total production (see table above.)

While the major portion of the corn crop is produced in the Coastal Plains, there is a wide variation between counties within this area. Twelve counties accounted for 57 percent of the total production in the Coastal Plains and for 43 percent of the total production in the State in 1960. Wayne County ranked first in the production of all corn and exceeded the production in Greene, the 12th ranked county, by more than two million bushels (see table below).

Rank Of 12 Counties Leading In Production Of All Corn, 1960, North Carolina

County	Acres Harvested	Yield	Production
	<i>Acres</i>	<i>(Bu.)</i>	<i>(Bu.)</i>
Wayne	85,300	53.0	4,521,000
Duplin	82,100	52.0	4,269,000
Pitt	80,300	51.0	4,095,000
Johnston	81,000	47.0	3,807,000
Sampson	72,600	46.0	3,340,000
Lenoir	59,400	51.5	3,059,000
Robeson	86,000	34.0	2,924,000
Beaufort	49,500	59.0	2,921,000
Columbus	57,900	47.5	2,750,000
Edgecombe	53,700	48.5	2,604,000
Wilson	49,500	51.0	2,524,000
Greene	47,300	52.0	2,460,000

HYBRID VARIETIES INCREASE YIELDS

The increase in the yield per acre and total production of corn has been closely related to the development of hybrids adapted to North Carolina. The proportion of the total corn acreage planted with hybrid seed increased from 1.3 percent in 1942 to 90.0 percent in 1960. Average yield per acre of all corn increased from 20.5 bushels in 1942 to 48.0 bushels in 1960. The largest annual increase in the planting of hybrids occurred when the percent of the total corn acreage planted with hybrid seed moved from 46.5 percent in 1954 to 60.5 percent in 1955.

North Carolina ranked eleventh among the States in the Production of corn for grain in 1960. The ten States ranking ahead of North Carolina in the production of corn for grain, in the order named were: Iowa, Illinois, Indiana, Nebraska, Minnesota, Ohio, Missouri, South Dakota, Wisconsin, and Michigan.

NORTH CAROLINA ALL CORN, 1866-1960
