

NORTH CAROLINA

Agricultural Statistics

SWEETPOTATOES and IRISH POTATOES

Featuring County Estimates

APRIL 1964

FOREWORD

This publication, which is devoted to Irish potatoes and sweetpotatoes, is the eighth in a series to be issued for major crops produced in North Carolina. It has been prepared in response to a sharp increase in the number of requests for historical information on crop acreages and production at the county level.

County estimates on the acreage, yield, production, price and value are shown for Irish potatoes on pages 6 through 19 and for sweetpotatoes on pages 26 through inside back cover.

The publication of these data is made possible through a special project whereby State funds are matched with Federal funds received by the Agricultural Marketing Service, U.S.D.A., under provisions of the Agricultural Marketing Act of 1946.

Commissioner of Agriculture

NORTH CAROLINA PRODUCTION OF IRISH POTATOES

Irish potatoes are produced in all of the State's 100 counties with the major producing area being the Coastal Plains. In North Carolina there are three seasonal groups of Irish potatoes. The late spring crop is grown in the Coastal counties, while the Piedmont and Southern Mountain counties produce the early summer crop, and the late summer crop is produced in the Northern Mountain counties.

Irish potato acreage tripled from 1866 to 1904, moving from a low of 10,000 acres harvested to 30,000 acres during that period. After 1904 the acreage harvested followed a gradual upward trend, with occasional downward fluctuations, reaching a record 110,000 acres harvested in 1943. Since that time, however, the trend has been in the opposite direction. In 1963, North Carolina farmers harvested 21,900 acres of Irish potatoes. This was the lowest recorded since 1898 when 22,000 acres were

harvested. The record-low in 1963 was 800 acres or 3.5 percent below the 1962 level and 88,100 acres or 80.1 percent below the record high acreage harvested in 1943. The downward trend in the acreage of Irish potatoes since 1949 has occurred in all areas of the State.

In 1963 the yield of all Irish potatoes, at 142 cwt., was the highest of record. This marked the sixth consecutive year that the yield exceeded 100 cwt. per acre. These recent improvements in yield have partially offset some of the loss in production caused by the sharp decline in acreage, but even with this, production has shown a downward trend. In 1963 production of Irish potatoes in North Carolina was 3,102,000 cwt. This is 10.7 percent above 1962, but 48.9 percent below the 6,342,000 cwt. produced in 1948.

PRODUCTION OF IRISH POTATOES (Cont'd.)

The late spring crop of Irish potatoes, produced in the Coastal Plain, accounts for over two-thirds of the State's total production (see table below).

PRODUCTION OF IRISH POTATOES IN NORTH CAROLINA BY SEASONAL GROUPS, 1963

SEASONAL GROUP	PRODUCTION	PERCENT OF TOTAL
	<i>Cwt.</i>	<i>Percent</i>
Late Spring:		
8 N. E. Counties	1,736,000	56
Other Coastal Counties	384,000	12
TOTAL.....	2,120,000	68
Early Summer	562,000	18
Late Summer	420,000	14
STATE TOTAL.....	3,102,000	100

Production of the late spring crop is divided into two producing areas: namely the 'Eight Northeastern Counties' and 'Other Coastal Counties'. The 'Eight Northeastern counties' composed of Camden, Currituck, Pasquotank, Tyrrell, Pamlico, Beaufort, Carteret, and Hyde is the highest producing area in the State. In this section the 1963 acreage harvested was 51 percent of the State's total and the 1,736,000 cwt. produced made up 56 percent of the State's total production. In 1963 the total late spring crop accounted for 2,120,000 cwt. out of the State's production. Of this quantity the 'Eight Northeastern Counties' area accounted for 1,736,000 cwt. or 81.9 percent of the late spring crop while the 'Other Coastal Areas' accounted for 384,000 cwt. or 18.1 percent of the total late spring crop.

The early summer crop of Irish potatoes is produced in the Piedmont and Southern Mountain counties of North Carolina. In 1963 the early summer crop accounted for 20.5 percent of the State's total harvested acreage and provided 18 percent of the total production. A large percentage of the early summer crop is produced for home use. The major portion of the commercial early summer crop is produced in Henderson and Transylvania counties.

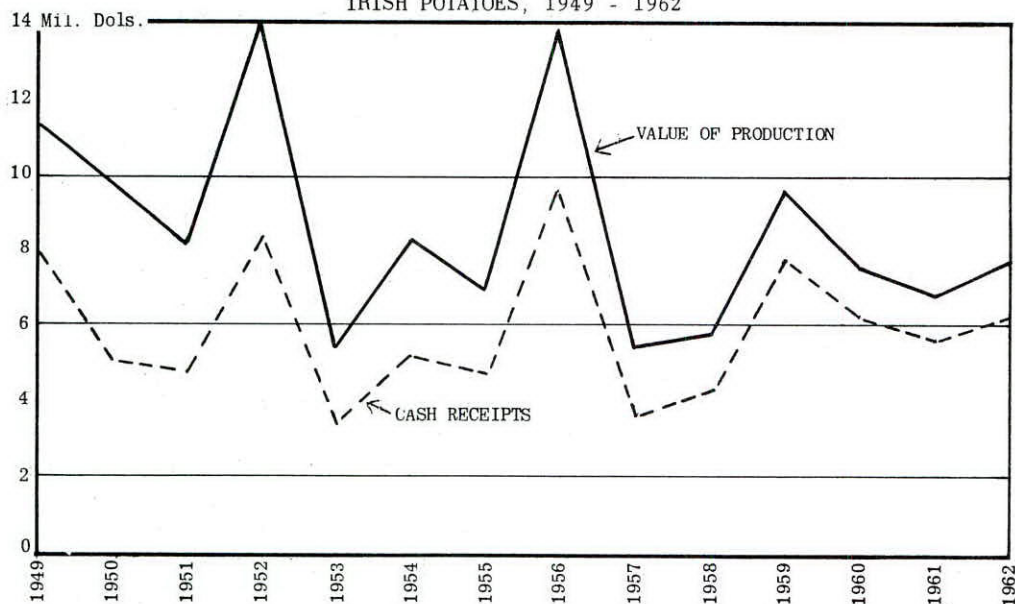

The last major producing area in the State is the Northern Mountain counties, where the late summer potato crop is grown. Unlike the early summer crop, a large percentage of the late summer potatoes is grown commercially. The leading commercial counties in the late summer area are Watauga, Ashe, and Avery. In 1963 there were 3,000 acres of late summer potatoes harvested. This is almost 14 percent of the State total. Production at 420,000 cwt. was 13.5 percent of the total production for the State.

RANK OF 12 LEADING COUNTIES IN PRODUCTION OF IRISH POTATOES, 1962, NORTH CAROLINA

COUNTY	ACRES HARVESTED	YIELD	PRODUCTION
	<i>Acres</i>	<i>Cwt.</i>	<i>Cwt.</i>
Pasquotank	3,650	130	474,500
Camden	2,200	130	287,000
Currituck	1,600	130	208,000
Beaufort	1,400	130	182,000
Watauga	900	135	121,500
Carteret	900	130	117,000
Tyrrell	900	125	112,500
Ashe	800	140	112,000
Transylvania	750	130	97,500
Pamlico	700	135	94,500
Avery	650	135	88,000
Henderson	600	130	78,000
TOTAL	15,050	1,580	1,972,500

North Carolina producers in 1962 received income totaling \$6,253,000 from sales of Irish potatoes. This was 12.1 percent above 1961 when a very low price held cash receipts at \$5,577,000. The highest of record since 1949 was in 1956 when farmers received \$9,638,000 for the Irish potato crop. In 1962 Irish potatoes accounted for .8 percent of all income received from crops in North Carolina. This was higher than 1961 when only .7 percent of all cash receipts from crops could be credited to Irish potatoes. It is emphasized that 'cash receipts' as used in this publication relate to money received for commodities sold during the calendar year, regardless of when produced. They do not refer to value of production for a given crop year.

CASH RECEIPTS AND VALUE OF PRODUCTION OF NORTH CAROLINA
IRISH POTATOES, 1949 - 1962

Value of production of the Irish potato crop in 1962 was \$7,763,000. This was 12.1 percent above 1961, but was 54.4 percent below the record-high \$17,018,000 recorded in 1948.

NORTH CAROLINA PRODUCTION OF SWEETPOTATOES

21

Sweetpotatoes are produced in nearly every county in North Carolina with the Coastal Plain being the major producing area. Production in the Piedmont and Mountain counties is used mainly for home consumption. Since a record 101,000 acres were harvested in 1932, sweetpotato acreages have taken a downward trend. In 1963 sweetpotatoes were harvested from 21,000 acres, the smallest acreage for the State of record. The 1963 acreage was 6,000 acres, or 22.2 percent, below that for 1962 when farmers harvested 27,000 acres.

Reductions in sweetpotato acreages have been largely offset by tremendous increases in yields per acre. In 1963 yield per acre was 125 cwt. This marked the fourth consecutive year that yield per acre equaled or exceeded 100 cwt. The 125 cwt. recorded in 1963 was 3.8 percent below the record 130 cwt. realized by producers in 1962, but it still was the second highest yield of record. In 1952 North Carolina's production of sweetpotatoes amounted to 2,280,000 cwt. from 38,000 acres for a yield of 60 cwt. per acre. In 1962 production totaled 3,510,000 cwt. from 27,000 acres for a yield of 130 cwt. per acre -- 53.9 percent more sweetpotatoes from 28.9 percent less acres than harvested in 1952.

In 1962 the twelve leading counties in the production of sweetpotatoes were as follows: Johnston, 551,000 cwt.; Columbus, 416,000 cwt.; Sampson, 301,000 cwt.; Harnett, 146,000 cwt.; Brunswick,

112,000 cwt.; Robeson, 112,000 cwt.; Duplin 91,000 cwt.; Wayne, 91,000 cwt.; Chowan, 82,600 cwt.; Pitt, 79,300 cwt.; Wilson, 74,200 cwt.; and Martin, 71,200 cwt. This group of counties accounted for over 60 percent of the State's total production during 1962.

In recent years the sweetpotato crop in North Carolina has rapidly become more commercialized. In 1950 nearly 29 percent of the crop was used for home consumption, while only about 37 percent was marketed for all purposes. In 1962 only about 10 percent was used for home consumption and over 66 percent was sold for all purposes. The introduction of processing plants in the State for sweetpotatoes has caused a larger portion of the crop to go through commercial channels than in the past. Today, there are several flaking and canning plants for sweetpotatoes located in the Coastal Plains. The following table illustrates the trend:

FARM DISPOSITION OF NORTH CAROLINA SWEETPOTATOES BY DECADES 1940-1960 AND FOR 1962

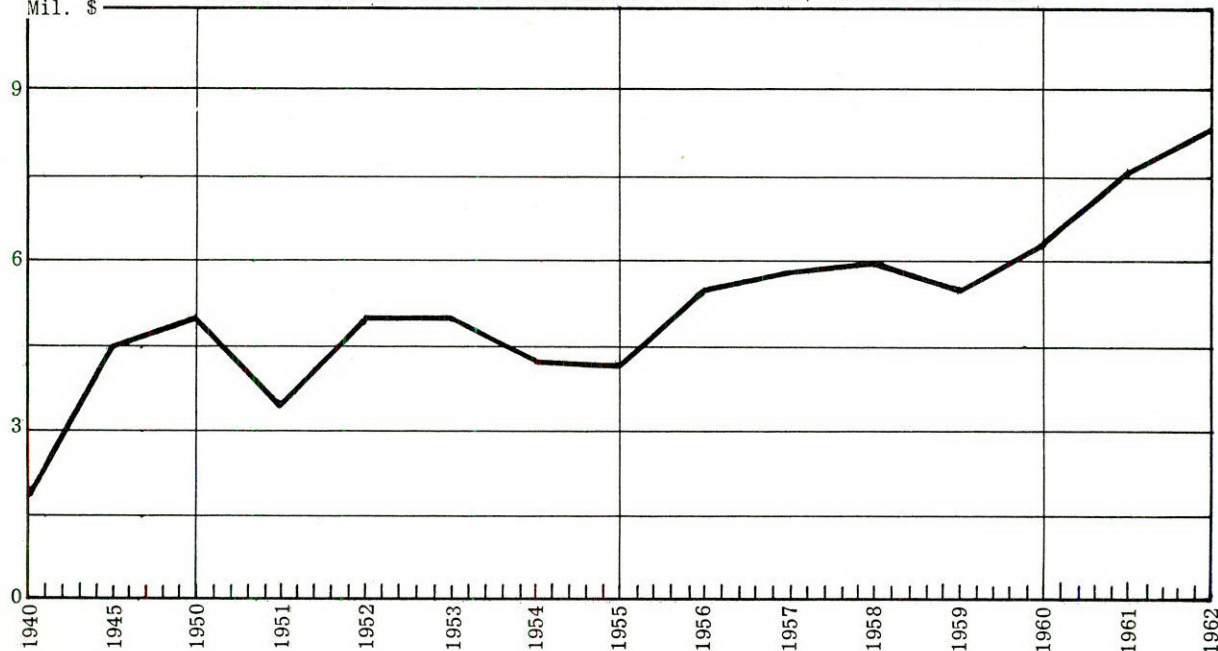

Year	PERCENT OF TOTAL PRODUCTION	
	Used For Home Consumption	Sold
1940	37	34
1950	29	38
1960	15	60
1962	11	67

RANK OF 12 LEADING COUNTIES IN PRODUCTION OF SWEETPOTATOES, 1962, NORTH CAROLINA

County	Acre Harvested	Yield	Production
	<u>Acres</u>	<u>Cwt.</u>	<u>Cwt.</u>
Johnston	3,800	145	551,000
Columbus	3,200	130	416,000

Wilson	530	140	74,200
Martin	570	125	71,200
12 Co. Total	15,590	1,615	2,127,300

A new record of cash receipts from sweetpotatoes was realized by North Carolina farmers in 1962. Value of sales during that year totaled \$8,399,000 surpassing the old record set in 1961 by \$737,000 or 9.6 percent. In recent years the trend of cash receipts received for sweetpotatoes is upward. This is due mainly to the larger percentage of the crop being sold commercially and to less being used for home consumption on farms where produced. Since 1955 when value of sales totaled \$4,064,000, cash receipts for the sweetpotato crop have more than doubled. In 1962 income from sweetpotatoes accounted for 1.1 percent of all income received from crops. This is .2 percent over 1961 when only .9 percent of all income received from crops grown in North Carolina came from sweetpotatoes.

North Carolina ranks second in the United States in the production of sweetpotatoes. Production in the State amounted to 2,625,000 cwt. in 1963 as compared to 3,510,000 cwt. in 1962--a decrease of 25.2 percent. The only state above North Carolina in production was Louisiana, where production totaled 3,770,000 cwt. in 1963. Like most of the commercial producing states, Louisiana had less production in 1963 than in 1962. The six leading states in descending order of sweetpotato production were Louisiana, North Carolina, Virginia, New Jersey, Georgia, and Texas. These six states produced 71.2 percent

of the Nation's sweetpotato crop in 1963.

North Carolina led the six major producing states in yield per acre by a large margin. In 1963 producers harvested 125 cwt. per acre. This was 25 cwt. or 25 percent more than New Jersey, which had the second highest yield among the six top producing states. In 1963 Louisiana farmers made a yield of only 65 cwt. per acre, which was slightly more than half the yield in North Carolina. Louisiana more than offset this tremendous difference in yield by harvesting 58,000 acres as compared with only 21,000 acres harvested in North Carolina.
