Agricultural Statistics

**LIVESTOCK, DAIRY,
& POULTRY ISSUE**

**HISTORICAL DATA
1867-1968**

Foreword

Current and accurate statistical information is vital to any sound and effective marketing program. Livestock, dairy and poultry production continues to gain in importance in the Tar Heel State. Recognizing this, the North Carolina Crop Reporting Service compiled this publication which is designed to bring together basic, current, and historical livestock, dairy, and poultry statistics in order that it may be readily available for farmers, agri-business, agricultural leaders, government leaders, and others in related industries.

Agriculture in North Carolina is rapidly changing. The farm population continues the downward trend. The number of farms continues to decline and, at the same time, farms are being consolidated—resulting in larger operations. Agricultural labor is becoming more difficult to obtain and is becoming more specialized. Wages are rapidly increasing, making it necessary to become more mechanized. Research through improved breeding, management, and feeding practices has produced animals that grow out faster and require less feed than in the past.

If continued progress is to be made in North Carolina's agriculture, new problems must be solved and new challenges must be met. In order to meet these problems, farmers, agri-business leaders and others need accurate and basic information to aid them in making sound marketing decisions and planning for meeting the ever-changing pattern of agriculture in North Carolina. This publication has been prepared to help meet these needs.

I am proud of this publication and commend the people who prepared it. It is useful and timely.

A handwritten signature in dark ink that reads "James A. Graham". The signature is fluid and cursive, with the first letters of the first and last names being capitalized and prominent.

JAMES A. GRAHAM
Commissioner of Agriculture

Front Cover

The front cover shows some scenes from the many types of livestock and poultry operations in North Carolina. Agriculture is big business in the Tar Heel State and constitutes a very important part of the State's economy. Preliminary cash receipts from farm marketings, including government payments, in 1967 totaled \$1,341,434,000. Cash receipts from marketings of livestock and products amounted to \$463,141,000, or 34.5 percent of total. Many more millions of dollars are realized from the transporting, processing, and merchandising of agricultural products in North Carolina.

DEDICATION

The agricultural statistics in this publication are official State and USDA estimates prepared by the North Carolina Crop and Livestock Reporting Service. This issue is dedicated to the many crop, livestock, and price reporters in North Carolina. They regularly and voluntarily contribute basic information which is used to develop these statistics on farm production in the Tar Heel State. Without the voluntary contribution from our faithful reporters who serve without pay, this publication would not be possible. Their contribution is sincerely appreciated.

NORTH CAROLINA LIVESTOCK

Lower prices received for livestock and poultry in North Carolina reduced cash farm income. In 1967 cash receipts from marketings of livestock and products constituted 35.0 percent of total marketings, excluding government payments. Comparable receipts for livestock in 1966 constituted 37.0 percent of total marketings and made up 29.4 percent of marketings in 1960. Receipts increased from \$314 million in 1960 to \$454 million in 1967, a gain of 45 percent.

Livestock and poultry production in North Carolina is becoming more and more commercialized and specialized. Farms are becoming fewer but larger. Rural population is rapidly declining while urban and suburban population is increasing rapidly. If this trend continues, which is inevitable, agricultural production will be in the hands of relatively few producers. They will have a tremendous responsibility of producing for an ever larger urban population. Nearly 94 percent of livestock and poultry produced in North Carolina during 1966 was marketed through commercial channels while slightly over 6 percent was consumed on farms where produced. As late as 1952, nearly one-third of the livestock and poultry produced in North Carolina was consumed on farms where produced. This percentage had declined to 15.6 percent of total by 1959 and in 1966 the percentage was 7.7 percent.

Cattle and Calves

On January 1, 1968, there were 1,000,000 cattle and calves on farms in North Carolina, up 1 percent from 1967 and 5 percent more than the January 1, 1962-66 average. The all cattle and calf inventory reached a peak of 995,000 on January 1, 1954. Cattle numbers declined to 889,000 on January 1, 1959, and gradually rose to the present level. Increases in beef cattle during recent years have, for the most part, been offset by a reduction in dairy cows.

Beef Cattle and Calves

Beef cattle and calves on farms January 1, 1968 totaled 673,000 head, an increase of 4 percent from the previous year. Beginning in 1953, beef cattle production has shown considerable gain in North Carolina. On January 1, 1953, there were 358,000 cattle and calves kept mainly for beef. By January 1, 1959, the number reached 403,000 head. Increases have occurred every year since, to the present 673,000 head. Rapid gains have been made in production of beef for market. For instance, marketings of cattle and calves in 1959 amounted to 171,125,000 pounds liveweight and rose to 217,030,000 pounds by 1967. Quality beef is being produced as a result of better breeding, management and feeding practices. North Carolina is abounded with many acres of good grassland. The potential for even greater beef production remains. Cash receipts from cattle and calf marketings have increased from \$22,966,000 in 1956, to \$44,862,000 in 1967.

Milk Cows and Production

On January 1, 1968, there were 214,000 milk cows two years old and older on North Carolina farms, down 5 percent from the number on farms a year earlier. Milk cow numbers have been declining rapidly in recent years. The trend toward fewer cows but greater production per cow continues. There were 345,000 milk cows two years old and older on farms January 1, 1957. Annual production per cow has increased from 5,160 pounds in 1956 to a record 7,440 pounds per cow in 1967. North Carolina is very likely approaching the low point in milk cow numbers. The downward trend cannot continue and still meet the demand for milk and milk products. Total pounds of milk produced in 1967 was 1,488 million compared with 1,475 million in 1966. The number of dairy farms has been rapidly declining in recent years. Herds are becoming larger and rate per cow is increasing. Although total production of milk is up only 1 percent from 1966, milk sold to plants and dealers increased 3 percent. This was possible since less milk was used on farms where produced.

Sales of milk by producers increased from 937 million pounds in 1956 to 1,275 million pounds in 1967. Cash receipts from marketings in 1967 totaled \$83,807,000 compared with \$78,400,000 in 1966. Cash receipts in 1956 totaled \$57,867,000. Average price received for milk in 1967 was \$6.47 per cwt. compared with \$6.21 in 1966.

Hogs

Production of hogs in North Carolina has fluctuated over the years in response to hog prices as determined by national production

and competition from other meat products. In recent years, the shift has been toward lean-type hogs to meet consumer preference.

On January 1, 1968, there were 1,426,000 hogs and pigs on farms, 3 percent more than the 1,384,000 on farms January 1, 1967. The record high number of hogs on farms was recorded on January 1, 1916, when the inventory totaled 1,675,000 head. The inventory declined to 1,021,000 in 1946. Sharp increases occurred from 1955 through 1960 when the inventory rose to 1,520,000, as of January 1, 1960. Inventory declined to 1,054,000 head on January 1, 1965, and has increased to the present 1,426,000 level. On January 1 this year North Carolina ranked 12th in the nation in hog inventory.

Hog production is becoming more and more specialized. Swine producers have maintained a high level of production through improved breeding, better management and feeding practices. The average number of pigs saved per sow has increased from about 6.0 pigs per litter in the 1930's to the present level of 7.6 per litter in spring of 1967.

Greater efficiency in production has enabled producers to market hogs at an earlier age. In 1967 the total liveweight of hogs marketed was 450,221,000 pounds. This compares with 315,924,000 pounds marketed in 1966. Cash receipts from hogs marketed in 1967 totaled \$96,782,000 compared with \$87,670,000 in 1966. With the farm population declining each year, consumption of pork on farms where produced has been greatly reduced. The value of home consumption of pork totaled \$39,262,000 in 1947 but declined sharply to \$17,822,000 by 1957 and to the 1967 value of \$11,240,000.

Poultry

Commercial broiler production in North Carolina reached a record high of 262,872,000 birds produced in 1967, an increase of 1 percent over the previous high of 260,269,000 produced in 1966. Broilers sold averaged 13.1 cents per pound in 1967 compared with 15.3 cents in 1966. Gross income from broilers produced in 1967 totaled \$123,970,000 compared with \$139,327,000 in 1966. North Carolina ranks fourth in broiler production after Georgia, Arkansas, and Alabama. Broiler production is becoming more and more specialized.

Farm chickens raised in 1967 totaled 14,961,000, 2 percent more than in 1966. Cash receipts from marketing of farm chickens amounted to \$6,765,000 in 1967 compared with \$6,596,000 in 1966.

Layers on farms during 1967 averaged 13,320,000 layers, with an average of 221 eggs per layer for the year. This compares with 12,714,000 layers and 214 eggs per layer in 1966. Layers have increased 63% since 1950. Eggs produced in 1967, at 2,949 million, was 9 percent more than production in 1966. Cash farm income from eggs in 1967 totaled \$88,068,000 compared with \$99,070,000 in 1966. Laying flocks are becoming larger and more commercialized.

Chickens on farms January 1, 1968, excluding commercial broilers, totaled 19,396,000, no change from the 19,396,000 on farms January 1, 1967. The January 1, 1968, inventory consisted of 6,396,000 hens, 7,358,000 pullets of laying age, 2,340,000 pullets three months old to laying age, 2,416,000 pullets under three months old and 886,000 other chickens.

Production of turkeys in North Carolina has grown by leaps and bounds in recent years. In 1951 turkeys raised totaled 783,000 birds. By 1961 the number raised reached 2,770,000 birds. The number raised in 1967 is placed at 6,937,000 birds, 13 percent more than in 1966. North Carolina ranks 7th in the nation in number of turkeys raised. Gross farm income from turkeys in 1967 was \$24,157,000 compared with \$25,091,000 received in 1966. Included in the above values are home consumption by producers on farms where produced which amounted to less than 1 percent of production.

Sheep and Lambs

Production of sheep and lambs in North Carolina has declined to a position of minor importance. Back in the 1880's sheep on farms in North Carolina reached over half a million head. Numbers declined sharply to 35,000 on farms as of January 1, 1949. Interest in sheep production was stimulated in the 50's and inventory rose to 55,000 on farms as of January 1, 1960. Since that time, numbers have declined to the present low level of 22,000 head on January 1, 1968.

The 1967 lamb crop totaled 17,000 lambs, 2,000 below the number in 1966. Wool shorn in 1967 amounted to 130,000 pounds, 9 percent below a year earlier. Cash receipts from the sale of sheep and wool amounted to \$231,000 in 1967 compared with \$299,000 in 1966.

L/ Civilian consumption only, beginning 1941. 2/ Approximately at wholesale level of distribution. 3/ Equivalent eviscerated weight basis. Although most of the poultry was sold in dressed form until the 1940's, most is now sold ready to cook. The entire series was put on the latter basis to achieve comparability. 4/ Measured approximately at wholesale level of distribution. Average weight of eggs through 1945 is assumed to be 1.5 pounds per dozen; conversion factor subsequently increased 0.01 pound each year through 1952, remained at 1.56 through 1956, thereafter 1.57. This change in factor allowed for the increasing size of eggs marketed. 5/ Not available. 6/ Preliminary.
