

NORTH CAROLINA - GROWN NURSERY STOCK

1968 Directory

FOREWORD

Production of nursery stock over the past several years has become increasingly important to the total economy--agriculture, business and industry--of the Tar Heel State, and there are currently more than 1,250 individuals or concerns in North Carolina licensed to sell nursery materials.

Increasing emphasis on highway beautification and landscaping, both residential and business, is also causing an ever-growing demand for new plantings and those who are in need of services provided by the nurserymen have experienced difficulty in finding the sources for the particular type of plants they would like to use.

The 1968 Directory of North Carolina Grown Nursery Stock has been prepared in answer to a request of the North Carolina Association of Nurserymen and the Association of Landscape Architects. The directory provides a listing of 344 nurserymen in the State who have participated in the listing of their inventories of plants for sale. It also provides the sources from which each of the various size of approximately 515 separate type plants may

be obtained in North Carolina.

Plans for the collection of the information contained in the inventory were formulated by the following committee:

Thomas O. Gilmore, Chairman and President, North Carolina Association of Nurserymen, Liberty, North Carolina.

Hugh Vann, Secretary-Treasurer, North Carolina Association of Nurserymen, Raleigh, N. C.

Bill Proctor, Proctor Brothers Nursery, Parkton, N. C.

Loddie D. Bryan, Landscape Architect, Raleigh, N. C.

Dr. Thomas F. Cannon, Associate Professor, Horticultural Science Department, NCSU, Raleigh, N. C.

Fred E. Whitfield, Extension Forester, NCSU, Raleigh, N. C.

Henry L. Rasor, Director, Statistics Division, NCDA, Raleigh, N. C.

Curtis F. Tarleton, Director, Markets Division, NCDA, Raleigh, N. C.

Howard M. Singletary, Entomologist, Entomology Division, NCDA, Raleigh, N. C.

The Statistics Division of the N. C. Department of Agriculture assumed the responsibility for the summary of the data and the preparation and dissemination of the directory. State funds for the project were matched with funds from the Consumer and Marketing Service of the United States Department of Agriculture under provisions of the Agricultural Marketing Act of 1946.

I am proud and take pleasure in presenting this Directory of North Carolina Grown Nursery Stock as a ready reference to North Carolina Nurserymen and to those interested in locating the sources for North Carolina grown stock.

A handwritten signature in dark ink, reading "James A. Graham". The signature is fluid and cursive, with the first letters of the first and last names being capitalized and prominent.

An Open Letter To:

THE CONSUMERS OF NORTH CAROLINA GROWN NURSERY STOCK

'A dream has become a reality.' The urgent 'need' of providing the consumers of North Carolina grown nursery stock with a marketing media through which plant material can be located in the state has been accomplished. This service was very badly needed for the growing nursery industry which is experiencing increasing demands due to the tremendous emphasis on national beautification.

For many years, consumers such as landscape architects, home developers, city planners, highway officials, landscape contractors and others have had difficulty in locating plant materials while at the same time nurserymen were unable to find buyers for the same material.

Thanks to the N. C. Department of Agriculture, James A. Graham, Commissioner, and in particular to the Entomology Division, Markets Division and Statistics Division, the first directory of North Carolina grown nursery stock has been published.

I am sure that the results of the first plant materials inventory report will mean much in the successful marketing of nursery stock and this plant directory will grow in volume, value and use in each and every future edition.

On behalf of the more than 1230 certified nurseries in North Carolina, we wish to express our appreciation for the valuable plant directory and very much hope that it can be continued on a yearly basis.

Sincerely yours,

Tom Gilmore, President
N. C. Association of Nurserymen

NURSERY WORK AT N. C. STATE UNIVERSITY

John Harris, Head
Horticultural Science Extension

We are proud of the role that N. C. State University has played in the development of the nursery industry in our state. The first educational short course for nurserymen was held at the campus in Raleigh in 1938. There were seventeen registered nurserymen at this meeting. Since that time the short course has become an annual event lasting for three days. This short course has the reputation of being one of the leading educational nursery meetings in the United States.

In 1958, with the leadership of M. E. Gardner, head of Horticulture Science Department at that time, the North Carolina Association of Nurserymen was organized. The membership now numbers over two hundred and fifty nurserymen with many landscape contractors and trade people as members also. There were seventy-five nurseries registered with the Department of Agriculture in 1920. In 1958, there were seven hundred and seventy-seven registered nurseries. There are at present approximately one thousand, two hundred and fifty nurseries in North Carolina. We are fortunate to have a climate and soils well suited to the production of nursery stock. North Carolina has a central location on the Eastern Seaboard which gives us both a southern and northern as well as western market for plant material.

In 1940, the first funds for research with nursery crops were made available through the North Carolina legislature. In 1949, a full time extension specialist was employed to work with nursery crops. At present there are six staff members at N. C. State University who devote full or part time to the nursery industry.

The Department of Horticultural Science at N. C. State University joins with the N. C. Department of Agriculture in hoping that this Directory of North Carolina Nursery Stock will be of great value to you.
