NORTH CAROLINA

AGRICULTURAL STATISTICS

1973 - 74
Annual

FOREWORD

The soaring demand for our farm products, both at home and abroad, is heightening the attention focused on agricultural statistics. And 1973 will be long remembered as the year of the big shift towards all out agricultural production to help satisfy this demand.

During 1973 the first favorable balance of trade in 3 years for the nation was brought about largely by a record surplus in agricultural trade. An agricultural trade surplus of \$9.3 billion wiped out a deficit of \$7.6 billion in nonagricultural shipments, leaving an overall trade surplus of \$1.7 billion. Agriculture's contribution was built on the sale of \$17.7 billion worth of U. S. farm products abroad against imports of \$8.4 billion.

On the average, each U. S. farmer produces enough food to feed 50 other people in this country and abroad. The production from about one acre in four is exported. Our farm products accounted for nearly one-fifth of the world's agricultural exports during fiscal 1973, making us the globe's leading farm exporter.

We can be proud of the contribution Tar Heel farmers made in feeding and clothing our Nation and in bringing about a favorable trade balance. In fact we rank number nine in the nation in the share of exports with \$526 million during 1973. Many North Carolina farm products figure heavily in world trade -- tobacco, cotton, peanuts, soybeans, feed grains, fruits and vegetables, livestock and poultry, and many other commodities.

For their efforts, North Carolina farmers earned about \$2.3 billion in cash receipts during 1973 -- up more than a third from the previous high reached a year earlier. But let us hasten to say that much of this increase was due to inflation and that production expenses were also at an all-time high.

Exports as well as all phases of trade must be planned and based upon sound statistics. If we do not know what commodities we have in reserve, what our production prospects are, what our needs are, and where our products are produced and stored, it would be impossible to plan wisely for domestic needs or exports.

This issue of "Agricultural Statistics" gives an essentially complete tally of agricultural production in North Carolina. It is with a great deal of pleasure that we make this statistical bulletin available to you.

NORTH CAROLINA CROP REPORTING DISTRICTS

North Carolina is divided into eight Crop Reporting Districts as outlined on the map below. County estimates in this publication for crops and livestock are compiled by Crop Reporting Districts, and the counties within each district are listed in alphabetical order.

This publication is the 126th in a series on Agricultural Statistics for North Carolina. The varityping was done by Evelyn L. Finch, Minnie H. Langley and Margaret S. Pinkham. The duplicating work was done by Charles H. Cross, Jr., and J. Kay Matthews. Statistical editor; Martha F. Early.

Good Year For Crop Production

Weather conditions over the Tar Heel State were cool and wet during the spring, but the year ended with warm, dry weather in the fall. In between, farmers had an excellent crop year and many yield and production records were set.

Spring rains caused early season planting setbacks. However, sunshine became common in April and most crop planting finished in a flurry during May. A mid-May frost and heavy Memorial weekend rains caused some crop damage in the mountains. Heavy rains in late June and early July lowered tobacco prospects, but hot, dry August weather added poundage to the crop. Dry weather began in late August causing corn, cotton and peanuts to mature quickly. Fall harvesting conditions were excellent and few problems were encountered. Crop quality was outstanding as crops were harvested with no water damage. Corn and peanut growers had their best year ever, but the dry fall hurt soybean and sweetpotato yields.

Crop Value Soars 42 Percent

The value of all crops produced on N. C. farms increased 42 percent over 1972 to a record \$1,471 million. Tobacco was the State's leading cash crop accounting for \$717 million, 49 percent of the total value of crop items. Corn for grain remained second in importance at \$270 million, soybeans came on to finish third and were worth \$202 million. These 3 crops accounted for 81 percent of the crop value in the State.

Harvested Acreage Up

Total acreage of major crops harvested in 1973 was around 4,555,000 acres, up 11 percent from the 4,116,000 acres harvested in 1972. Sharp increases in soybeans, corn and flue-cured tobacco resulted in the expansion. Smaller acreages of cotton, wheat and oats were harvested in 73.

Flue-Cured Leaf Production Soars

Giant increases in both acreage and yield resulted in the biggest tobacco crop since 1970 -- 790 million pounds. Farmers harvested 376,000 acres of bright leaf, 44,000 acres above the previous year. Yields averaged 2,111 pounds per acre, 118 pounds above 1972.

Tobacco prices continued to climb and a new high of 88.3¢ per pound was established for flue-cured leaf, bringing the value of the 1973 crop to \$700 million, 24 percent above the previous record set for the 1972 crop, and the highest valued leaf crop ever produced in the State.

The 1973 burley crop was cut from 7,700 acres and averaged 2,375 pounds per acre. Record high prices of 91.7¢ per pound resulted in a crop value of \$16.8 million.

Fantastic Peanut Year

Peanut producers had their best season ever. The 1973 crop got off to a fantastic start and fall digging weather was superb. Farmers produced 466 million pounds of peanuts, 26 percent more than in 1972, and 5 percent more than the old record set in 1970. A statewide yield of 2,810 pounds per acre was set, 580 pounds above 1972. Peanut acreage combined for nuts continued to hold at a relatively steady level of 166,000 acres. Value of the crop was \$77 million, the most valuable peanut crop ever produced. Average price per pound at 16.6¢ was 2.1¢ above 1972 -- which until 1973 was the top price.

Cotton Crop Best In 8 Years

More bales of cotton were produced on Tar Heel soil in 1973 than any year since 1965. Growers picked 164,000 bales, 45,000 above 1972. Yield was excellent as growers averaged 455 pounds of lint per acre. Acreage abandoned was small during the year and growers picked cotton on 173,000 acres--182,000 acres were planted.

Cotton prices rose sharply and averaged about 58.9¢ per pound, a whopping 27.3¢ per pound above a year earlier and the highest prices since Civil War days.

Corn Yield At Alltime High

For the second straight year corn producers made an excellent crop. The crop was planted fast in the spring and timely rains during the season resulted in near perfect growing conditions. Yields averaged a record 82 bushels per acre, 2 bushels above 1972. Growers produced nearly 115 million bushels of corn, 12 percent above 1972. Corn for grain was harvested from 1,400,000 acres, 12,000 acres above a year earlier. Fall harvesting conditions were ideal.

Value of the crop was \$270 million, a whopping 78 percent above 1972. The average price received for the crop was \$2.35 a bushel, 87¢ a bushel higher than the 1972 average.

Soybeans -- Another Record

Production of soybeans spiralled in 1973. Producers combined soybeans from a record 1,500,000 acres -- 29 percent above the acreage harvested the previous fall.

The dry fall hurt yields and farmers only averaged 24 bushels per acre -- 1 bushel below a year earlier. However, with the large acreage, production totaled an estimated 36,000,000 bushels, surpassing by nearly 7 million bushels the old record set in 1972. The weather was near perfect for harvesting.

Soybean prices for the 1973 crop averaged about \$5.60 per bushel, exceeding the average price of the 1972 crop by \$1.47. The crop was valued at \$202 million, 68 percent above the previous year.

Vegetable Value Up 37 Percent

The combined value of 1973 commercial fresh and processed vegetable crops in N. C. is estimated at \$39.7 million, 37 percent above the 1972 value. The value of the processing crop was up only 13 percent, whereas value of fresh market crop soared 46 percent.

Acreage planted to commercial vegetables at 74,230 acres remained about the same as it had for the past 2 years. Fresh market acreage comprised about 45,000 acres, while processing acreage accounted for around 29,000 acres.

Spring Frosts Hurt Small Grain

Spring weather was not ideal for small grains (wheat, oats, barley, rye) as late season frosts in April and again in mid-May hurt development. Many grain heads did not fill out well and were shorter than normal. Heavy rains in late June caught about 35 percent of the acreage unharvested and caused some lodging. Wheat and rye production declined, while oats and barley staged 11 percent increases.

Wheat production continued to decline in the State, only 5,600,000 bushels were combined in 1973 -- 10 percent below 1972 and the smallest amount since 1966. At \$2.75 per bushel the average price was double that of a year earlier.

Rye production continues on a downhill slide as only 266,000 bushels were combined on N. C. farms, the smallest amount since 1962 when 240,000 bushels were threshed. Oat yields were above 1972, thus accounting for the larger production; however, the 75,000 acres harvested for grain were the smallest since record keeping began back in 1866. Barley production at 2,852,000 bushels was slightly above 1972.

Apples Down, Peaches, Grapes, Pecans Higher

The 1973 commercial apple crop (sold and utilized) is estimated at 210 million pounds, 35 million pounds below the good 1972 crop. Frost as late as May 18 took its toll as growth was stunted, thus apple size was reduced.

Increased grape acreage was partially responsible for the 3,400 tons produced in 1973. This was 1,200 tons above 1972 and the largest N. C. tonnage since 1948 when 3,400 tons were also produced. Peach growers had a better year in 73 as 30 million pounds were grown, 5 million above a year earlier. After a near crop failure of only 500,000 pounds in 1972, pecan production shot up to 1,800,000 pounds during 1973.

L/ 480 pound net weight bales. 2/ Includes all kinds of hays except alfalfa. * Too small to estimate.

NOTE: In some cases the acreage or yield or production is identical for more than one year. In such cases the year shown is the latest year of occurrence.

Cash Receipts -- Record High

Preliminary estimates of cash receipts from sales of livestock and poultry products climbed to a record high during 1973 in North Carolina. Cash receipts totaled \$952 million -- an increase of 48 percent over the \$642 million received in 1972. Cash receipts from broilers accounted for 29 percent of total livestock and poultry receipts; hog production, 23 percent; egg production, 17 percent and dairy production, 13 percent. All other products accounted for 18 percent.

Record High Income From Cattle

On January 1, 1974 the estimated inventory of cattle and calves on Tar Heel farms totaled 1,070,000 head -- 3 percent more than a year earlier. This marks the third consecutive year in which the beginning inventory has exceeded one million.

Increases in beef cattle during recent years have, for the most part, been offset by a reduction in dairy cows. On January 1, 1974 the number of dairy cows, at 155,000, decreased 4 percent from the previous January 1, while the number of beef cows increased 6 percent to 384,000 head.

Calves born during 1973 numbered 490,000, a record high for the State. This exceeds the 1972 calf crop of 473,000 by 4 percent and the 459,000 born in 1971 by 7 percent. Most of the calves are either used for cow replacements or are shipped out of state for further feeding. Cattle on feed for slaughter market as of January 1, 1974 totaled only 48,000 head. This represents a 7 percent increase from the 45,000 on feed January 1, 1973 but only 2 percent above the January 1, 1972 number.

Gross income from cattle and calves during 1973 was a record high \$103 million. The major component of gross income, cash receipts, increased 45 percent to \$95 million while value of home consumption increased 31 percent for a record \$7.6 million. The average price per hundredweight for cattle increased from \$28.50 in 1972 to \$36.60 in 1973, and for calves it increased from \$43.10 in 1972 to \$57.30 in 1973.

Milk Production Down Slightly

The average number of milk cows on farms has steadily decreased for the past several years. During 1973, the average number of milk cows on farms decreased 3 percent to 158,000. However, production of milk and milkfat per cow continues to gain. Milk production per cow went from 9,429 pounds in 1972 to 9,646 pounds in 1973 -- a 2 percent increase. Milkfat per cow likewise increased -- from 352 pounds in 1972 to 359 in 1973. Total production of whole milk decreased to 1,524 million pounds in 1973 from the 1972 total of 1,537 million pounds. Total milkfat remained unchanged at 57 million pounds in 1973.

The quantity of milk marketed by N. C. producers decreased 10 million pounds to 1,369 million pounds in 1973. As a result of a 17 percent increase in the price received per hundredweight for milk and per pound milk fat, the cash receipts from marketings increased 8 percent to \$119 million. Prices received for milk in 1973 averaged \$8.67 per cwt. compared with \$7.42 in 1972.

Egg Production Down

North Carolina continues to rank fifth in total chicken egg production behind California, Georgia, Arkansas and Pennsylvania. Egg production within the state as well as across the nation decreased during 1973. N. C. egg output decreased 6 percent for a total production of 3,213 million eggs. Only 1 percent of the total egg production was consumed in farm households, the remaining 3,188 million eggs were sold, averaging 58.9 cents per dozen. Gross income from eggs, at \$158 million was a record high -- 60 percent above the 1972 total.

Hog Numbers And Income Up

As of December 1, 1973, N. C. ranked tenth among states in hog inventory. The 1,950,000 head on farms represented a 12 percent increase from the 1,739,000 a year earlier. The 1973 pig crop -- December 1972 through November 1973 -- totaled 3,004,000 pigs, a 2 percent increase from the 2,955,000 pig crop of 1972. A total of 410,000 sows farrowed during 1973, producing an average of 7.33 pigs per litter. North Carolina's hog industry continues to become more commercialized. In 1973 more than one-third of all hogs produced came from herds of 500 or more hogs.

Hogs continue to produce a major portion of total livestock gross income. Cash receipts increased 36 percent and value of home consumption increased 54 percent from 1972 to 1973. The total (cash receipts plus home consumption) amounted to \$215 million in 1973, an increase of 37 percent from 1972. As a result of increasing food cost, the value of home consumption of pork increased sharply during 1973, even though farm population continued to decline steadily. The value of home consumption of pork totaled \$23.1 million in 1952 but declined tremendously to the 1972 value of \$11.6 million; in 1973 the value of home consumption amounted to \$17.9 million.

Sheep Numbers Steady

All sheep and lambs on farms on January 1, 1974 totaled 12,000 -- unchanged from the preceding year. A downward trend in numbers had been the pattern for the last few years even though the price per hundredweight for sheep and lambs has steadily increased. The average price received per hundredweight for sheep sold during 1973 increased 57 percent to \$11.00; for lambs it increased 14 percent to \$32.00.

Gross income for sheep and lambs in 1973 decreased 3 percent from 1972. Cash receipts decreased to \$115,000 and value of home consumption increased to \$41,000; therefore, gross income totaled \$156,000.

The number of sheep and lambs shorn in 1973 totaled 12,000, unchanged from 1972. Fleece weight of shorn wool averaged 6.7 pounds, also the same as a year earlier. Wool production totaled 80,000 pounds in 1973. With an average price received of 58 cents per pound, cash receipts totaled \$46,400 -- an increase of 44 percent from 1972.

Income From Broilers Up 70 Percent

Broiler production continues to contribute the largest gross income to the livestock, dairy and poultry picture in N. C. Tobacco is the only agricultural commodity that exceeds broilers in gross income.

Commercial broiler production declined from the record high of 301,772,000 birds in 1972 to 290,448,000 birds in 1973. Gross income in 1973 reached a new record high for broiler production, increasing 70 percent from \$164 million in 1972 to \$278 million in 1973. The average price per pound increased 76 percent over 1972 to 24.5 cents per pound.

North Carolina ranks fourth in the nation in broiler production behind Arkansas, Georgia and Alabama.

Turkeys Continue Third

Turkey production and gross income in N. C. continues to rank third among the states. California, Minnesota and North Carolina account for 41 percent of the poults raised, 38 percent of the pounds produced and 40 percent of the gross income from turkeys in the United States.

The total gross income from turkeys in N. C. almost doubled in 1973 to \$86 million. Heavy breeds raised in the State during 1973 totaled 11,478,000 birds; light breeds numbered 1,600,000 birds for a total of 13,078,000 -- an increase of 9 percent from 1972. The average price per pound increased 70 percent -- from 22.4 cents in 1972 to 38.1 cents per pound in 1973.

Million Dollars

^{1/} Includes bulbs, plants and trees. ^{2/} Repairs and maintenance of buildings, motor vehicles and other machinery, and petroleum fuel and oil used in the farm business. ^{3/} Includes interest on non-real-estate debt, pesticides, ginning, electricity and telephones, livestock marketing charges, containers, milk hauling, irrigation, grazing, binding materials, tolls for sirup, horses and mules, harness and saddlery, blacksmithing and hardware, veterinary services and medicines, net insurance premium (crop, fire, wind and hail) and miscellaneous dairy, nursery, greenhouse, apiary and other supplies. ^{4/} Includes cash wages, perquisites and (1951 to date) social security taxes paid by employers. ^{5/} Includes depreciation and accidental damage to farm buildings and depreciation of motor vehicles and other farm machinery and equipment.

AGRICULTURE: How North Carolina Ranks Among States

1st	in flue-cured tobacco production
1st	in total tobacco production
1st	in value of home consumption from crops and livestock
1st	in cash receipts from Farm Forestry
3rd	in sweet potato production
3rd	in peanut production
4th	in turkey production
4th	in commercial broiler production
5th	in number of farms (in 1974)
6th	in egg production
8th	in cash farm income from crops
8th	in apple production
9th	in peach production
10th	in number of hogs on farms
10th	in hog production
12th	in soybean production
12th	in corn production
12th	in sorghum grain production
19th	in cash farm income from livestock
19th	in Irish potato production
19th	in oat production
21st	in number of milk cows on farms
22nd	in winter wheat production
22nd	in milk production
35th	in number of all cattle on farms

NOTE: Production figures are for 1973. Income figures are for 1972. Inventory numbers are as of January 1, 1974.

1/ Census incomplete. 2/ No Census. 3/ Totals exclude Forsyth and Catawba Counties. 4/ Revised totals exclude Forsyth County.

DISTRIBUTION OF HARVESTED CROPLAND: Acres, 1972

STATISTICAL REPORTS PROGRAM

NORTH CAROLINA AGRICULTURAL STATISTICS brings together the more important series of current and historic statistics concerning agriculture in the State. Where possible, types of information most often requested by farmers, by the general public and workers in other Government agencies are included. Semi-monthly releases entitled "Farm Report" and various other periodic releases are published to meet the needs of persons requiring information on a weekly, monthly or seasonal basis.

Crop and livestock reporting is a service rendered to farmers and others in the State by the Statistical Reporting Service of the U. S. Department of Agriculture in cooperation with the North Carolina Department of Agriculture.

The collection and dissemination of agricultural statistics is the oldest activity of the United States Department of Agriculture, having had its start in 1863 during the Civil War. Recognizing the many advantages of a joint relationship between the State and Federal Governments in the development of agricultural statistics, North Carolina, in 1919, entered into a cooperative agreement with the U. S. Department of Agriculture to provide detailed agricultural statistics. The agreement resulted in the creation of the Statistics Division of the North Carolina Department of Agriculture.

OFFICIAL ESTIMATES PUBLISHED

The North Carolina Crop Reporting Service publishes official statistics on crop and livestock production, prices and various other special reports. A list of the more important reports and the approximate date of release is shown in the table at right. These reports may be obtained without charge, by writing to Agricultural Statistician, P. O. Box 27767, Raleigh, North Carolina 27611.
