Hyatt

FOREWORD

Recent world wide developments in regard to food supplies have again called attention to the dependence of society on agriculture. Products from the soil will continue to be of prime importance in sustaining life.

Just as a banker must maintain accurate records, so must we know about our agricultural output. Location of production and the resultant income are of interest to many people and businesses. As we plan for future development we need to know the current situation and especially the contribution agriculture makes toward the total economy of our state and each county.

Again the State Department of Agriculture, the Agricultural Extension Service and the Statistical Reporting Service of USDA have combined their resources and capabilities to prepare these detailed estimates of farm income. This is another example of how agricultural agencies work together for the common good.

We hope that you find this publication interesting and useful. Your comments on its usefulness or on ways of improving it will be appreciated.

U.S. DEPARTMENT OF AGRICULTURE Statistical Reporting Service	N.C. DEPARTMENT OF AGRICULTURE James A. Graham, Commissioner	N.C. AGRICULTURAL EXTENSION SERVICE George Hyatt, Jr., Director
---	---	--

Raleigh, N. C.

The entire staff of the N. C. Crop Reporting Service made valuable contributions to this publication as did numerous Extension Service specialists and all 100 county extension offices. Special recognition is given to William C. Hinson, Assistant Statistician In Charge, N. C. Crop Reporting Service, and Dr. Charles R. Pugh, Extension Economist, Agricultural Policy, N. C. Agricultural Extension Service, for planning and guidance in this project on farm income.

ABOUT THIS ISSUE

This is the second issue of this publication in a continuing series of annual farm income reports for North Carolina. While extensive effort has been made to ensure accuracy, data for 1972 should be considered preliminary; data for 1971 have been revised in many instances from those published a year ago.

The allocation of farm income to counties utilized information organized by both the Agricultural Extension Service and the Federal-State Crop Reporting Service. In addition to basic data generated by these two agencies, numerous other sources were used in developing income estimates: Agricultural Stabilization and Conservation Service, U. S. Department of Commerce, N. C. Annual Farm Census, State Milk Commission, and many other government and private entities. Thus, this publication represents an achievement in combining pertinent information from an array of public and private sources to develop estimates clearly depicting the status of N. C. agriculture in terms of a common denominator -- the dollar.

Data in this report should be especially useful in assessing the importance of numerous commodities as sources of farm income. The greater benefit, however, may be derived in using this report to examine the geographical distribution and trends in farm income rather than absolute levels of estimates.

State totals of farm income in this report are the same as published by the U. S. Department of Agriculture and thus are comparable with other states. The state-level estimates were prepared by the Economic Research Service of the USDA based mostly on data collected and compiled by the Statistical Reporting Service, USDA.

Beginning with this issue, additional data tables are included as an aid to users: distribution of 1971-72 farm cash receipts by Extension Service Districts, income by counties from all forest products (farm plus commercial) and from seafood in 1972, N. C. cash receipts from farming by Commodities from 1967-72, and a comparison of cash receipts from farming by states in 1972.

CONCEPTS AND DEFINITIONS

Cash Receipts from Farm Marketings as presented in this bulletin represent gross returns from the actual sales of crops and livestock and livestock products during the calendar year. The value of home consumption of farm products and inter-farm sales of livestock is not included as cash receipts. Production expenses such as feed, fuel, fertilizer, marketing costs, and purchases of other inputs are not subtracted from cash receipts. The addition of government payments to cash receipts provides a measure of gross cash income, or total cash receipts from farming.

County estimates of cash receipts reflect farm productivity of the county to which the income is assigned. For example, livestock produced in one county but sold in another for immediate slaughter are credited only to the producing county. Similarly, income from crops is credited to the producing county even though the crops may be stored, processed and marketed in another.

Crop Income: Cash receipts from marketing of crops is the final product of several underlying estimates: acreage and yield, the percent of total production sold, price, and changes in inventories.

(Continued Next Page)

The estimated percent sold based on survey data from individual farmers was applied to the total production for each crop for each county. Estimates of prices for crops for each county were established based on reports from farmers and buyers of farm products.

For several field crops, especially corn, soybeans, and cotton -- where portions are carried over -- the calendar year cash receipts are not to be compared with crop year value of sales or value of production. Calendar year cash receipts from such crops represent sales of parts of production from two or more crop years. For crops where all or nearly all the production is harvested and marketed within a single calendar year, the cash receipts are essentially the same as the value of production.

County estimates of cash receipts are shown in the tables of this publication for such individual crops as tobacco, corn, soybeans, peanuts, cotton and cottonseed. Additional sources of crop income are shown in categories.

The receipts from "Other field crops" include wheat, oats, barley, rye, grain sorghum, hay, seed crops and miscellaneous field crops. The value of grain crops used on the farms where produced is not included in these income data.

Receipts from "Vegetables, fruits, nuts, and berries" include a wide array of horticultural or truck crops. Statewide, the most important income sources in this category are: sweet potatoes, cucumbers, apples, snap beans, potatoes, tomatoes, peppers, cabbage, and peaches.

"Farm forest, greenhouse and nursery" includes sales of pulpwood, timber, Christmas trees and forest products from farm tracts only. Cash receipts from farm forestry are restricted to the value of products sold from woodlands associated with general farming operations. Essentially all income is excluded from farm cash receipts if derived from public-owned forests, woodland tracts owned by institutions and public utilities, holdings of paper, pulp, lumber and other wood products companies, and large privately-owned woodland tracts that are not part of a general farming operation. Nursery and greenhouse includes ornamental shrubs and trees, flowers grown outdoors and many types of flowers, ornamentals and plants produced in greenhouses for commercial sale.

Livestock and Poultry Income: The annual cash receipts from farm marketings of livestock and livestock products also refer to the calendar year. Receipts include the sales value of an animal only once, usually the value at the time it is sold for slaughter or final disposition. Since some livestock move from county to county at various stages of growth, the value assigned to the county is based on a "value added" concept. Each county is given net credit for the portion of the final value originating within its boundaries.

These income data do not exactly represent the summation of all income received by livestock and poultry producers in a given county. For example, feeder pigs or cattle sold from one farm to another within a county are included only upon final disposition. Also, where commodities such as broilers are produced under contract, the farmer may directly receive only a contract payment. However, these data include the full value at the farm level of the poultry sold.

1/ Includes total income from farm and commercial forestry as estimated by County Extension agents. The portion from commercial forestry is not included in cash farm receipts from farm marketings.

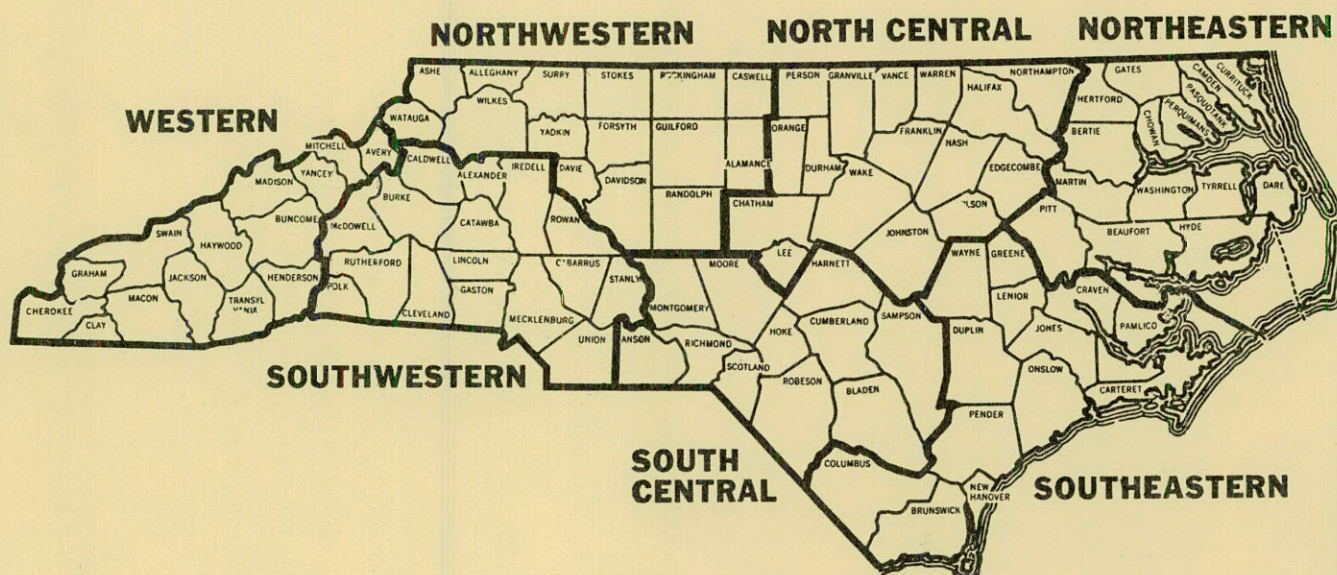

2/ Based on dockside value of the commercial catch at the point of landing, as estimated by National Marine Fishery Service, U. S. Department of Commerce, Beaufort, N. C.

NORTH CAROLINA CROP REPORTING DISTRICTS

North Carolina is divided into eight Crop Reporting Districts as outlined on the above map. County estimates of cash receipts shown on pages 4 - 13 in this publication are compiled by these districts. Counties within each district are listed alphabetically.

NORTH CAROLINA AGRICULTURAL EXTENSION SERVICE DISTRICTS

North Carolina comprises seven Extension Service Districts as depicted on the map. Cash receipts and government payments are summarized by these districts on pages 14 - 15. Income from forestry and seafood is shown on page 20 by counties listed alphabetically within these districts.
