NORTH CAROLINA

AGRICULTURAL STATISTICS

**Office of
THE COMMISSIONER OF AGRICULTURE
Raleigh, North Carolina**

Agriculture is big business in North Carolina!

North Carolina farmers raise the best turkeys, broilers, hogs, and cattle; grow the best fruits and vegetables; produce the highest quality tobacco, grains, cotton, peanuts, sweetpotatoes, and potatoes. Their efforts allow all of us to enjoy quality products at reasonable prices.

In these times when agriculture's effect on the environment is a major concern, farmers are still expected to be profitable, to produce inexpensive food and protect the environment. To their credit, farmers in North Carolina have been willing to do their best to try and fulfill these expectations.

We at the North Carolina Department of Agriculture are also concerned about the environment and want to encourage the safe, smart use of pesticides and other agricultural chemicals. As members of the agricultural and agribusiness communities, we all need to be aware of environmentally safe and sound practices when it comes to applying agricultural chemicals, raising livestock, harvesting crops and processing commodities. We are called to be stewards of the environment as well as producers of safe, healthy food.

Environmental statistics are becoming a vital part of the overall agricultural statistics picture. North Carolina farmers want to protect the environment and preserve our natural resources. These statistics will help in achieving these goals.

The official data provided in this annual statistics book are made available to farmers and agribusiness people throughout the state to help inform them about current conditions of the state's agricultural commodities. These statistics can help all of us be good shepherds of our natural, God-given resources. My sincere thanks to the farmers, enumerators and statisticians who have helped provide, collect and interpret the data included in this book.

Best wishes.

Cordially,

James A. Graham
Commissioner

Marketing Year Average Prices for Specified Crops	75
Annual Average Prices for Specified Commodities	75
Milk - Prices Received for Fluid Use, Manufacture	
and all Milk, by Months	75
Average Prices Paid for Feed, by Months	76

NOTE: All tables in this publication pertain to North Carolina unless otherwise specified.

James A. Graham
Commissioner

North Carolina
Department of Agriculture
Agricultural Statistics Division

Robert M. Murphy
State Statistician

The successful farm operator of the future will be the person who has command of all the information available at any given time in which to make an informed decision. It is with great pleasure and pride that the North Carolina Agricultural Statistics Division presents the *1992 North Carolina Statistics* as one of the many tools on which to base sound decisions. We have continued to strive to make this publication one that is useful to anyone needing data about North Carolina agriculture.

Throughout the *1992 North Carolina Agricultural Statistics* you'll find facts and information on many facets of our state's agricultural industry. Most of these data were made possible by the voluntary cooperation of farmers, agribusiness people, and others involved in North Carolina's number one industry. Without their cooperation, completing thousands of questionnaires on the hundreds of surveys conducted each year, this publication would not be possible.

Environmental statistics have become an important part of the total agricultural statistics program. Incorporated into this bulletin for the first time are new data series relating to the use of agriculture chemicals on various commodities. These data will be expanded in future publications as we continue to collect additional information.

In closing, I want to again extend a sincere "Thank you" to the many farmers, agribusinesses, and others that take their time to voluntarily report by mail, telephone, or personal interview. I also want to express my gratitude and appreciation to the office staff and to our fine staff of field and office enumerators for the many dedicated hours they have provided in order to accomplish our mission of producing accurate, unbiased North Carolina agricultural statistics.

Sincerely,

Bob Murphy
State Statistician

STATISTICAL REPORTS PROGRAM

NORTH CAROLINA AGRICULTURAL STATISTICS brings together the current and historic statistics concerning agriculture in the State. Where possible, types of information most often requested by farmers, the general public, and workers in government agencies are included.

Reporting of crop and livestock statistics is a service rendered to farmers and others in the State by the National Agricultural Statistics Service of the U.S. Department of Agriculture in cooperation with the North Carolina Department of Agriculture.

The collection and dissemination of agricultural statistics had its start in 1863. This is one of the oldest activities of the United States Department of Agriculture. It was recognized that there were many advantages of a joint relationship between the State and Federal Governments in the development of agricultural statistics. Thus, in 1919 the N.C. Department of Agriculture entered into a cooperative agreement with the U.S. Department of Agriculture to provide detailed agricultural statistics. The agreement resulted in the creation of the Agricultural Statistics Division of the North Carolina Department of Agriculture.

The North Carolina Agricultural Statistics Division publishes official statistics on crops, livestock, prices, and various other agricultural items. A list of the most important reports and the approximate dates of release is shown in the table below. Those reports marked with an (*) are issued separately. All others are included in the semi-monthly release entitled "Farm Report". There is a nominal charge for these reports, which are available by writing to:

¹ A farm is any establishment from which \$1,000 or more of agricultural products were sold or would normally be sold during the year.

1991 WAS ANOTHER WARM YEAR FOR NORTH CAROLINA

Warm weather was experienced throughout the entire state as temperatures continued above normal for most of the year. Precipitation was near expected amounts for the year for most locations. March and August were the wettest months while October and November were the driest for the year.

January was wetter than usual as several storm fronts dropped moderate amounts of moisture. The first storm was a cold front producing freezing rain on the eighth. Precipitation totals exceeded one inch at several locations on the 11th and 14th. Later in the month, a system producing strong thunderstorms moved from the southwest along the coast dumping over two inches of rain.

February was much drier than normal with record breaking warm weather. Temperatures were above normal every week of the month despite an arctic blast causing lows in the teens for most areas of the state on the 15th. February saw many days of highs above 70 degrees.

Unsettled weather conditions marked the beginning of March. A strong storm moved across the state from the first to the third. Thunderstorms associated with this large area of low pressure produced tornadoes resulting in some structural damage in Elizabeth City. Snow developed from a cold front moving through the mountains on the eighth leaving as much as two to three inches. In the last week a cold front and storm system brought severe weather, dropping over two inches of rain and causing some flooding.

April began with cool temperatures, but by the end of the first week high pressure had pumped in warm southwesterly winds. Towards the middle of the month, a tornado touched down near Marion, downing trees and power lines.

Warm temperatures continued to dominate May. Several fronts occurring throughout the month generated isolated thunderstorms causing rainfall amounts to be varied between the different regions of the state.

The first few days of June were hot and humid. A cold front moved through on the 4th with dry warm air following. Much of the state was in need of rain. By the end of the month, heavy afternoon thunderstorms occurred in the Coastal Plain region. Counties in the northern Piedmont were still suffering from below normal rain amounts.

A high pressure system off the Atlantic caused record highs early in July. Heavy showers poured over five inches of rain in the southeastern part of the state during the last week with Clinton receiving nearly ten inches.

A low pressure system drifting slowly northeasterly on August 2 spawned severe weather conditions again for the southeast. Three tornadoes were seen in Onslow County as the storm moved through the area. Clearing skies produced record breaking highs. A cold front on the ninth reduced daily highs by approximately ten degrees. Hurricane Bob moved along the Gulf Stream east of the state on the 18th drenching the Outer Banks and low lying coastal areas. Cape Hatteras reported over five inches of rain and tropical storm level winds. Conditions for thunderstorms continued for the rest of the month.

Hot and drier than usual conditions existed for the first half of September with the Bermuda high pressure becoming stationary. Asheville saw three record hot days in a row from the 14th through the 16th. On the 19th a strong cold front brought temperatures down and provided much needed rain to the state. A dry cold front moved in on the 25th.

October is usually the driest month, but this year it was drier than normal. Many stations reported rain averages less than a third of what is typically expected. The mountains were particularly dry. Asheville and Hickory had only one tenth inch of rain for the month, all time lows.

An upper-level ridge of high pressure continued the dry weather into November with all reporting stations experiencing less than average precipitation for the first week of the month. A powerful storm system over the Atlantic provided cool rains to the state on the tenth. Both Mt. Mitchell and Mt. Pisgah received over three inches of rain on the 21st. Warm air followed with highs in the upper 70's. On the 24th, a very cold, dry front sent temperatures dipping into the teens and low 20's, setting several new lows for that date. The un-orderly pattern continued as the month ended with southerly air flows causing temperatures to reach the upper 70's to low 80's.

Weather patterns for December resembled November in that warm and cold fronts followed each other producing wide variations in temperatures. In general, temperatures continued the above average trend that began almost two years earlier.

¹ Some counties not shown separately to avoid disclosing individual operations. ² Includes total income from farm and commercial forestry as estimated by County Extension Agents. The portion from commercial forestry is not included in cash farm receipts from farm marketings. ³ This estimate includes both commercial farm ponds and marine seafood. Trout and catfish income from commercial farm ponds was estimated by County Extension Agents. The income from seafood was based on dockside value of the commercial catch at the point of landing, as estimated by National Marine Fishery Service, U.S. Department of Commerce, Beaufort, N.C. District totals do not equal State total to avoid disclosing individual operations.

1991 North Carolina Crops Summary

Flue-Cured Tobacco Yield a Record High

Flue-cured tobacco production in North Carolina totaled 617 million pounds in 1991, down less than one percent from last year's near record high production. Farmers harvested 266,000 acres, 10,000 fewer than in 1990. Yield per acre averaged a record high 2,318 pounds, 36 pounds above the previous high set in 1964 and 66 pounds above 1990.

Value of the flue-cured crop totaled \$1.07 billion, \$22 million more than the previous crop and only the seventh year that the value has exceeded one billion dollars. Farmers received an average price of \$173.00 per hundred pounds, \$4.90 more than the 1990 average.

Cotton Production Highest Since 1948

The State's cotton growers produced 640,000 bales in 1991, more than doubling 1990's 263,000 bales and the highest since 1948. Acreage harvested also saw a sharp increase from 200,000 to 457,000. The yield per acre rose 41 pounds above the 1990 figure to 672 pounds.

Value of cotton lint was a record high \$182 million for 1991, more than twice that of 1990 and four times that of 1989's value. Price per pound averaged 59.3 cents compared with 69 cents the previous season. Although the value of cottonseed was up from \$10.2 million in 1990 to \$12.1 million last year, the average market price fell from \$112.00 to \$53.00 per ton.

Soybean Yield Breaks Record High

North Carolina's 1991 soybean yield was 29.5 bushels per acre, breaking the record of 27.0 set in 1988 and 1989. Overall production for the State was 38.6 million bushels, up 19% from 1990. Acres harvested, at 1.31 million acres, were 3% less than 1990.

The value of production was placed at \$210.6 million, 14% more than the 1990 value of \$184 million. The average market price for the year was \$5.45 per bushel compared with \$5.68 a year earlier.

Wheat Production Declines

The 1991 wheat crop in North Carolina totaled 19.2 million bushels, down 15% from 1990. Area harvested, at 480,000 acres, was down 13%. Yield per acre averaged 40 bushels, down slightly from 41 bushels in 1990.

Value of production totaled \$54.7 million, 19% less than the previous year. The marketing year average price was \$2.85 compared with \$3.00 in 1990.

Apple Production Up

The 1991 apple crop in North Carolina totaled 260 million pounds, up 13% from 1990.

The crop's value rose to \$23.2 million, up one percent from 1990. Price per pound averaged 8.9 cents compared with 10.0 cents in 1990.

Burley Tobacco Production Remains Steady

Burley tobacco production in 1991, at 18 million pounds, was virtually unchanged from 1990. There were 9,000 acres harvested last year, up 10% from 1990. Growers averaged 2,000 pounds per acre, down 195 pounds per acre from last year's yield.

The 1991 crop was valued at \$31.9 million, up slightly from the previous year's value of \$31.4 million. The average market price received was \$177.20 per hundred pounds compared with \$174.30 for sales from 1990.

Corn Production Improves

The State's production of corn for grain in 1991 totaled 85.5 million bushels, 18% greater than the 1990 production. Tar Heel farmers harvested 950,000 acres of corn last year. This was 120,000 fewer acres than were harvested in 1990. Average yield, at 90 bushels per acre, increased 22 bushels from 1990.

The value of the crop totaled \$222 million, up 21% from a year earlier. The average price of \$2.60 per bushel was \$.07 above the previous year's price of \$2.53.

Peanut Production Down Slightly

Peanut farmers harvested 462 million pounds in 1991, down 3% from the previous year. Yield per acre averaged 2,850 pounds per acre on 162,000 acres compared to 2,900 pounds per acre on 164,000 acres for 1990.

Value of production totaled \$127 million, down from 1990's value of \$166 million. The average market price for 1991 was 27.4 cents per pound, down 7.5 cents from 1990.

Sweetpotato Production Drops

Sweetpotato production in 1991 totaled 4.05 million cwt., 18% below the 1990 crop of 4.93 million. Area harvested, at 30,000 acres is four thousand less than a year earlier. Yield per acre averaged 135 cwt., down ten cwt. from 1990.

Although production was down, the value of the sweetpotato crop was \$40.5 million, 2% less than the 1990 crop. Prices were up \$1.60 per cwt. from 1990 to \$10.00 per cwt.

Irish Potato Production Down

Irish potato production totaled 3.04 million cwt. in 1991, 10% less than produced a year earlier. Area harvested, at 18,400, was up 5% from 1990. Yield averaged 165 cwt. per acre, 27 cwt. below the previous season.

Value of production, at \$22.9 million, was a 17% improvement over 1990 primarily because of better prices. Average price per cwt. was \$7.50, up from 1990's average of \$5.75.

North Carolina Livestock Summary

Livestock, Dairy and Poultry

Receipts Drop

Cash receipts from all livestock, dairy, and poultry products dropped 2% from 1990 to 2.6 billion in 1991. Gains were recorded for hogs, sheep, and catfish, but receipts were off for broilers, eggs, cattle, turkeys, milk, and trout. Cash receipts for all poultry products totaled \$1.5 billion, 4% below 1990. Broilers, at \$777 million, accounted for 30% of the total livestock, dairy, and poultry cash receipts. Receipts from hogs accounted for 25% of the total and at \$659 million was up 7% from the previous year. Milk cash receipts decreased 13% from 1990 to \$204 million. Cash receipts from turkeys sold totaled \$431 million, 5% less than 1990. Eggs produced during 1991 brought in \$200 million, 5% below the previous year. Receipts from cattle and calves dropped 1% from 1990 to \$176 million in 1991. Aquaculture rose 3% from 1990 to \$6.2 million because of the 42% jump in catfish sales.

Broiler Production Up

Receipts Down

Broiler production in North Carolina reached a record high 2.7 billion pounds in 1991. This is up 3% from last year's record high of 2.6 billion pounds. North Carolina held on to its number four ranking in broiler production with a total of 547 million birds produced.

The average price of 29.0 cents per pound for broilers decreased 2.0 cents and yielded a gross income of \$777 million for the State, 3% below last year. Income from broilers is the largest contributor to cash receipts for the livestock, dairy and poultry commodity group, making up about 30% of the income for this group.

Hog Production Record High

North Carolina hog production reached a record 1.5 billion pounds in 1991, 24% above last year's record. December 1, 1991 hog and pig inventory of 3,650,000 was also a record high, 30% above the previous year. A crop of 6.3 million pigs was produced in the State during the year, another record high and 24% above the 5.1 million in 1990. The average litter size rose to 8.57 pigs in 1991 compared to 8.23 pigs the previous year.

Hog marketings for the year increased 13% to 5.7 million head. The average price for hogs decreased \$4.60 to \$47.20 per cwt. Despite the lower price, increased production caused a 7% gain in cash receipts to \$659 million for the State. The value of home consumption slipped 4% to \$4.7 million.

Turkeys Record High

Receipts Down

North Carolina retained the number one ranking in turkey production during 1991 with a record high total of 1,166 million pounds produced, up 1% from the 1,160 million pounds the previous year. The number of turkeys raised was unchanged from 1990 at 58 million. Despite the increase in meat production, a 2 cents drop in price per pound caused cash receipts to drop to \$431 million, 5% below 1990's record high \$452 million.

Milk Receipts Down

Cash receipts for sales of milk and cream produced in North Carolina decreased 13% from 1990 and totaled \$204 million. The value of milk produced was down 13% to \$209 million. Fluid milk prices declined 13% to \$13.70 per hundredweight in 1991.

Milk production increased slightly in 1991 to 1.53 billion pounds compared with 1.52 billion pounds in 1990. The average number of milk cows at 99,000 head was 1% less than the average in 1990. Output per cow in 1991, at 15,424 pounds, was up 204 pounds.

Egg Receipts Down

The value of egg production in North Carolina decreased 5% in 1991 to \$200 million. Price per dozen declined 5% to 78.7 cents while the number of eggs produced remained unchanged at 3.0 billion. The State ranks eighth nationally in the value of egg production.

Cattle Inventory Up

Inventory of cattle and calves in North Carolina as of January 1, 1992 was 1,000,000, up 5% from January 1, 1991. Cattle marketings declined 4% to 192,000 head and calf marketings declined 3% to 170,000 head. Calf births at 450,000 head were down 2%.

Cash receipts from cattle and calves in the State totaled \$176.4 million, down 1% from 1990. A 1% decrease in pounds of cattle and calves marketed was responsible for the decline in receipts. The slight decrease in cattle price was offset by the increase in calf price, thus having little effect on the cash receipts. The value of home consumption fell 13% in 1991 to \$9.9 million.

Sheep Marketings Up

North Carolina sheep and lamb marketings in 1991 at 710 head jumped 31% over 1990. Cash receipts rose 28% over 1990, climbing to \$287,000. The decline in sheep and lamb prices held cash receipts down. The cash receipts increase was mainly due to the sheep and lamb marketing increase. The value of home consumption declined 7% from the previous year.

Sheep and lamb numbers rose to 17,900 head as of January 1, 1992, an increase of 5% above a year ago. The 1991 lamb crop bounced to 13,800 head, an increase of 15% above last year.

Trout Sales Down

Trout growers in North Carolina sold a total of 3.7 million pounds of trout (foodsize, stockers, and fingerlings) valued at \$4.6 million during the 12-month period beginning September 1, 1990 and ending August 31, 1991. Previous year trout sales totaled 4.0 million pounds valued at \$4.9 million. The number of commercial producers in 1991 was 68, down 7 from the previous year.

Catfish Sales Rise

Catfish growers in North Carolina had sales of \$1.6 million in 1991, up 42% from the \$1.2 million the previous year. The number of operations on January 1, 1992 in the State was 54. The water surface acres being used for catfish production in the State on January 1, 1992 totaled 1,300 acres, unchanged from July 1, 1991.

CATFISH

Catfish growers in the 16 selected States had sales of \$285 million during 1991. These sales were down 13% from the 1990 total sales of \$329 million.

Sales of stockers, fingerlings, and fry totaled \$19.1 million, down 21% from the \$24.2 million in sales during 1990. Sales of all food size fish totaled \$264.4 million, down 13% from last year's total of \$305 million. Direct sales to processors accounted for 93% of the total sales of food size fish. The total number of operations January 1, 1992 in the 16 selected States was 1,886, down 3% from the July 1, 1991 total of 1,943.

Hatchery operations had 1.50 million broodfish on hand on January 1, 1992, up 12% from the 1.34 million on hand January 1, 1991. All food size fish on hand totaled 244 million on January 1, 1992, up 2% from the 239 million fish on hand a year ago. Total number of stockers on hand January 1, 1992, at 685 million, were up 66% from the previous year. There were 1.12 billion fingerlings on hand January 1, 1992, up 1% from the 1.11 billion fingerlings on hand January 1, 1991.

North Carolina producers sold 2.3 million pounds of food size, stockers, fingerlings and fry fish in 1991, 72% more than the previous year. Food size fish accounted for 95% of the total pounds sold and averaged 64 cents per pound. Direct sales to processors accounted for 96% of food size sales.

TROUT

The value of trout sales in North Carolina totaled \$4.6 million for the period September 1, 1990 - August 31, 1991. This compares with \$4.9 million sold the previous year. North Carolina's 68 commercial trout producers had sales of 3,701,000 pounds. Sales of foodsize trout accounted for 94% of total sales, with stockers accounting for 3% and fingerlings 3%. Total losses of trout totaled 211,000 pounds, 70% less than last year's heavy losses. Disease was the major cause of losses, at 148,000 pounds, accounting for 70% of all poundage lost. Losses from flooding declined from 56% last year to only 5% this year.
