

AGRICHEMICAL POLLUTION PREVENTION MEASURES

Agrichemical Pollution Prevention Measures means a planned system to prevent chemical delivery to water courses for water quality improvement.

Policies

1. A WIN-PST environmental risk evaluation of the interactions of predominant farm soil types and selected pesticides (or active ingredients) may be considered to assess potential water quality impacts.
2. Producers are encouraged to develop a Pest Management Plan utilizing the NC NRCS 595 Pest Management Job Sheet.
3. Information on the use of WIN-PST is available on the NC NRCS website at: <http://www.nc.nrcs.usda.gov/technical/TechRef/techref-water.html> and in the NC NRCS 595 Pest Management Standard
