PAGE 1 OF 2
The shelter has recently undergone an outbreak of a disease. The Director notified AWS by phone of the situation. A CARE 525.0230 - Veterinary Care - State in (b) "If there is a disease problem that persists for more than 30 days, the facility director shall obtain and follow a veterinarian's written recommendations for correcting the problem." The Director has complied on this issue.

Dr. John Leary and Dr. Kim Ludington have been working with the Director on cleaning and disease prevention. Today there were no visible signs of illness noted during the inspection.

The Director pointed out that the shelter will soon be using a commercial dishwasher to clean and sanitize the feed and water bowls. The Director asked if the "no-pet" room could be used as an extra isolation area. I advised that it could be used. The isolation area is very limited at the shelter.

Another new policy at the shelter is a room has been set aside with direct entrance so the officer may bring what they deem as "adoptable" dogs directly to this area without exposing them to the general population. The shelter is also removing the boxes more frequently from the runs.

The Director and Shelter Manager go a walk through all the kennels every day to determine if any new problems have arisen.

Temperatures were 70° in all animal areas.

Both stations were discussed as a means of disease prevention. A new food storage area has been created and is completed.
